Nikon celebrates its 100th anniversary

Synthetic Silica Glass Ingot, the Symbol of Nikon

We are happy to announce that Nikon marks the 100th Anniversary on July 25, 2017. Nikon has already opened a special website featuring the synthetic silica glass ingot which was manufactured by Glass Business Unit. (<http://www.nikon.com/100th/>) Please come and see for yourself and experience the size and transparency of the ingot as it is exhibited in the main entrance of the Nikon museum.

Nikon started production of optical glass one year after it was founded and has been supplying internally for their own products. It has only been over 10 years since Nikon Glass Business unit started external sales, but will continue to expand the variation of current glass materials as well as new products. We hope you visit our booth at exhibitions and see our products.

Supporting Office for Nikon Glass Business Unit in U.S.A.

On September 2016, Glass Business Unit has newly established a sales supporting office (Glass Division US Office) in USA as part of Nikon Precision Inc. following the opening of European office. We will contribute to the customers across the country with faster response and expand sales and support as the second overseas office.
