

Nikon Corporation

2024 CDP Corporate Questionnaire 2024

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

[Terms of disclosure for corporate questionnaire 2024 - CDP](#)

Contents

C1. Introduction	7
(1.1) In which language are you submitting your response?	7
(1.2) Select the currency used for all financial information disclosed throughout your response.	7
(1.3) Provide an overview and introduction to your organization.	7
(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.	7
(1.4.1) What is your organization’s annual revenue for the reporting period?	8
(1.5) Provide details on your reporting boundary.	8
(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?	8
(1.7) Select the countries/areas in which you operate.	10
(1.8) Are you able to provide geolocation data for your facilities?	11
(1.8.1) Please provide all available geolocation data for your facilities.	11
(1.24) Has your organization mapped its value chain?	15
(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?	16
C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities	18
(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?	18
(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?	19
(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?	20
(2.2.2) Provide details of your organization’s process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.	20
(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?	26
(2.3) Have you identified priority locations across your value chain?	27
(2.4) How does your organization define substantive effects on your organization?	28
(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?	30
(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.	31
C3. Disclosure of risks and opportunities	33
(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	33
(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	34
(3.2) Within each river basin, how many facilities are exposed to substantive effects of water-related risks, and what percentage of your total number of facilities does this represent?	41
(3.3) In the reporting year, was your organization subject to any fines, enforcement orders, and/or other penalties for water-related regulatory violations?	44

(3.5) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?	44
(3.5.1) Select the carbon pricing regulation(s) which impact your operations.	45
(3.5.3) Complete the following table for each of the tax systems you are regulated by.	45
(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?	45
(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?	46
(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.	46
(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.	51

C4. Governance 53

(4.1) Does your organization have a board of directors or an equivalent governing body?	53
(4.1.1) Is there board-level oversight of environmental issues within your organization?	54
(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.	54
(4.2) Does your organization's board have competency on environmental issues?	58
(4.3) Is there management-level responsibility for environmental issues within your organization?	60
(4.3.1) Provide the highest senior management-level positions or committees with responsibility for environmental issues (do not include the names of individuals).	60
(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?	64
(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).	65
(4.6) Does your organization have an environmental policy that addresses environmental issues?	68
(4.6.1) Provide details of your environmental policies.	68
(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?	70
(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?	71
(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.	72
(4.12) Have you published information about your organization's response to environmental issues for this reporting year in places other than your CDP response?	75
(4.12.1) Provide details on the information published about your organization's response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.	75

C5. Business strategy 78

(5.1) Does your organization use scenario analysis to identify environmental outcomes?	78
(5.1.1) Provide details of the scenarios used in your organization's scenario analysis.	78
(5.1.2) Provide details of the outcomes of your organization's scenario analysis.	86
(5.2) Does your organization's strategy include a climate transition plan?	88
(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?	90
(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.	90
(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.	92

(5.4) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?	93
(5.4.1) Quantify the amount and percentage share of your spending/revenue that is aligned with your organization’s climate transition.	93
(5.5) Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?	94
(5.5.2) Provide details of your organization’s investments in low-carbon R&D for capital goods products and services over the last three years.	95
(5.9) What is the trend in your organization’s water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?	96
(5.10) Does your organization use an internal price on environmental externalities?	96
(5.10.1) Provide details of your organization’s internal price on carbon.	97
(5.11) Do you engage with your value chain on environmental issues?	99
(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?	101
(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?	103
(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization’s purchasing process?	104
(5.11.6) Provide details of the environmental requirements that suppliers have to meet as part of your organization’s purchasing process, and the compliance measures in place.	104
(5.11.7) Provide further details of your organization’s supplier engagement on environmental issues.	107
(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.	110

C6. Environmental Performance - Consolidation Approach 115

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.....	115
--	-----

C7. Environmental performance - Climate Change..... 117

(7.1) Is this your first year of reporting emissions data to CDP?	117
(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?.....	117
(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?	117
(7.1.3) Have your organization’s base year emissions and past years’ emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?....	118
(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.	119
(7.3) Describe your organization’s approach to reporting Scope 2 emissions.	119
(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?.....	120
(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.	120
(7.5) Provide your base year and base year emissions.	121
(7.6) What were your organization’s gross global Scope 1 emissions in metric tons CO2e?	128
(7.7) What were your organization’s gross global Scope 2 emissions in metric tons CO2e?	129
(7.8) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.	129
(7.9) Indicate the verification/assurance status that applies to your reported emissions.	138
(7.9.1) Provide further details of the verification/assurance undertaken for your Scope 1 emissions, and attach the relevant statements.	139
(7.9.2) Provide further details of the verification/assurance undertaken for your Scope 2 emissions and attach the relevant statements.	140

(7.9.3) Provide further details of the verification/assurance undertaken for your Scope 3 emissions and attach the relevant statements.	141
(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?	143
(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.	143
(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?	149
(7.11) How do your total Scope 3 emissions for the reporting year compare to those of the previous reporting year?	149
(7.11.1) For each Scope 3 category calculated in 7.8, specify how your emissions compare to the previous year and identify the reason for any change.	149
(7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization?	156
(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type?	156
(7.15.1) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used global warming potential (GWP).	156
(7.16) Break down your total gross global Scope 1 and 2 emissions by country/area.	159
(7.17) Indicate which gross global Scope 1 emissions breakdowns you are able to provide.	162
(7.17.1) Break down your total gross global Scope 1 emissions by business division.	162
(7.17.3) Break down your total gross global Scope 1 emissions by business activity.	165
(7.20) Indicate which gross global Scope 2 emissions breakdowns you are able to provide.	165
(7.20.1) Break down your total gross global Scope 2 emissions by business division.	165
(7.20.3) Break down your total gross global Scope 2 emissions by business activity.	169
(7.22) Break down your gross Scope 1 and Scope 2 emissions between your consolidated accounting group and other entities included in your response.	169
(7.23) Is your organization able to break down your emissions data for any of the subsidiaries included in your CDP response?	171
(7.23.1) Break down your gross Scope 1 and Scope 2 emissions by subsidiary.	171
(7.29) What percentage of your total operational spend in the reporting year was on energy?	189
(7.30) Select which energy-related activities your organization has undertaken.	189
(7.30.1) Report your organization's energy consumption totals (excluding feedstocks) in MWh.	190
(7.30.6) Select the applications of your organization's consumption of fuel.	193
(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.	194
(7.30.9) Provide details on the electricity, heat, steam, and cooling your organization has generated and consumed in the reporting year.	201
(7.30.16) Provide a breakdown by country/area of your electricity/heat/steam/cooling consumption in the reporting year.	203
(7.30.17) Provide details of your organization's renewable electricity purchases in the reporting year by country/area.	209
(7.30.18) Provide details of your organization's low-carbon heat, steam, and cooling purchases in the reporting year by country/area.	221
(7.30.19) Provide details of your organization's renewable electricity generation by country/area in the reporting year.	221
(7.30.20) Describe how your organization's renewable electricity sourcing strategy directly or indirectly contributes to bringing new capacity into the grid in the countries/areas in which you operate.	224
(7.30.21) In the reporting year, has your organization faced barriers or challenges to sourcing renewable electricity?	224
(7.30.22) Provide details of the country/area-specific challenges to sourcing renewable electricity faced by your organization in the reporting year.	225
(7.34) Does your organization measure the efficiency of any of its products or services?	225
(7.34.1) Provide details of the metrics used to measure the efficiency of your organization's products or services.	226
(7.45) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.	226
(7.52) Provide any additional climate-related metrics relevant to your business.	228

(7.53) Did you have an emissions target that was active in the reporting year?	231
(7.53.1) Provide details of your absolute emissions targets and progress made against those targets.....	231
(7.54) Did you have any other climate-related targets that were active in the reporting year?.....	243
(7.54.1) Provide details of your targets to increase or maintain low-carbon energy consumption or production.	243
(7.54.2) Provide details of any other climate-related targets, including methane reduction targets.....	246
(7.54.3) Provide details of your net-zero target(s).....	253
(7.55) Did you have emissions reduction initiatives that were active within the reporting year? Note that this can include those in the planning and/or implementation phases.	256
(7.55.1) Identify the total number of initiatives at each stage of development, and for those in the implementation stages, the estimated CO2e savings.	256
(7.55.2) Provide details on the initiatives implemented in the reporting year in the table below.	256
(7.55.3) What methods do you use to drive investment in emissions reduction activities?	284
(7.71) Does your organization assess the life cycle emissions of any of its products or services?	285
(7.71.1) Provide details of how your organization assesses the life cycle emissions of its products or services.....	286
(7.74) Do you classify any of your existing goods and/or services as low-carbon products?	287
(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.	287
(7.79) Has your organization canceled any project-based carbon credits within the reporting year?.....	289

C9. Environmental performance - Water security..... 290

(9.1) Are there any exclusions from your disclosure of water-related data?	290
(9.1.1) Provide details on these exclusions	290
(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?	291
(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?	299
(9.2.4) Indicate whether water is withdrawn from areas with water stress, provide the volume, how it compares with the previous reporting year, and how it is forecasted to change.	302
(9.2.7) Provide total water withdrawal data by source.	303
(9.2.8) Provide total water discharge data by destination.....	306
(9.2.9) Within your direct operations, indicate the highest level(s) to which you treat your discharge.	308
(9.2.10) Provide details of your organization’s emissions of nitrates, phosphates, pesticides, and other priority substances to water in the reporting year.	312
(9.3) In your direct operations and upstream value chain, what is the number of facilities where you have identified substantive water-related dependencies, impacts, risks, and opportunities?	313
(9.3.1) For each facility referenced in 9.3, provide coordinates, water accounting data, and a comparison with the previous reporting year.....	314
(9.3.2) For the facilities in your direct operations referenced in 9.3.1, what proportion of water accounting data has been third party verified?	324
(9.5) Provide a figure for your organization’s total water withdrawal efficiency.	326
(9.12) Provide any available water intensity values for your organization’s products or services.	327
(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?	328
(9.13.1) What percentage of your company’s revenue is associated with products containing substances classified as hazardous by a regulatory authority?	328
(9.14) Do you classify any of your current products and/or services as low water impact?	329
(9.15) Do you have any water-related targets?	329

(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.	330
(9.15.2) Provide details of your water-related targets and the progress made.	331

C10. Environmental performance - Plastics 334

(10.1) Do you have plastics-related targets, and if so what type?	334
(10.2) Indicate whether your organization engages in the following activities.	334
(10.4) Provide the total weight of plastic durable goods and durable components produced, sold and/or used, and indicate the raw material content.	337
(10.5) Provide the total weight of plastic packaging sold and/or used and indicate the raw material content.	338
(10.5.1) Indicate the circularity potential of the plastic packaging you sold and/or used.	339

C11. Environmental performance - Biodiversity 340

(11.2) What actions has your organization taken in the reporting year to progress your biodiversity-related commitments?	340
(11.3) Does your organization use biodiversity indicators to monitor performance across its activities?	340
(11.4) Does your organization have activities located in or near to areas important for biodiversity in the reporting year?	340

C13. Further information & sign off 342

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?	342
(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?	342
(13.3) Provide the following information for the person that has signed off (approved) your CDP response.	343

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

JPY

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

Publicly traded organization

(1.3.3) Description of organization

Nikon provides products and services based on the core technologies of Opto-Electronics Technologies and Precision Technologies and through its corporate philosophy of Trustworthiness and Creativity. It is a global company that supports the realization of an even more prosperous society by responding to the hopes and expectations of people and industries. Nikon's consolidated revenue for FY2023 is 727,345million yen and the total number of employees is 19,444 people. (As of March 31, 2024).

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

	End date of reporting year	Alignment of this reporting period with your financial reporting period	Indicate if you are providing emissions data for past reporting years
	03/31/2024	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> No

[Fixed row]

(1.4.1) What is your organization’s annual revenue for the reporting period?

717245000000

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

ISIN code - bond

(1.6.1) Does your organization use this unique identifier?

Select from:

No

ISIN code - equity

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

3657400002

CUSIP number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

No

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

No

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

Yes

(1.6.2) Provide your unique identifier

690550868

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

No

[Add row]

(1.7) Select the countries/areas in which you operate.

Select all that apply

China

Japan

Germany

Thailand

United States of America

Lao People's Democratic Republic

United Kingdom of Great Britain and Northern Ireland

(1.8) Are you able to provide geolocation data for your facilities?

	Are you able to provide geolocation data for your facilities?	Comment

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

- Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

- Upstream value chain
- Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

- Tier 2 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

- Tier 3 suppliers

(1.24.7) Description of mapping process and coverage

Nikon conducts assessments using SAQ, a CSR questionnaire, and evaluates suppliers' environmental activities in accordance with external standards such as RBA. Additionally, through our own environmental management system surveys, we confirm our suppliers' environmental protection systems and systems for managing chemical substances contained in products. In some supply chains, there are cases where suppliers up to the second level are known. We cover approximately 2,250 tier 1 suppliers, and have identified approximately 250 procurement partners that we will focus on based on the procurement amount, importance of procured parts, substitutability, etc. (approximately 80% of procurement amount). We are working hard to engage mainly with this company.
[Fixed row]

(1.24.1) Have you mapped where in your direct operations or elsewhere in your value chain plastics are produced, commercialized, used, and/or disposed of?

	Plastics mapping	Value chain stages covered in mapping
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, we have mapped or are currently in the process of mapping plastics in our value chain	<i>Select all that apply</i> <input checked="" type="checkbox"/> Upstream value chain <input checked="" type="checkbox"/> Downstream value chain

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

3

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Nikon has currently set a four-year mid-term management plan up to fiscal year 2025. Short-term factors are set to three years, but we are examining whether they will become apparent during the period of the mid-term management plan.

Medium-term

(2.1.1) From (years)

3

(2.1.3) To (years)

7

(2.1.4) How this time horizon is linked to strategic and/or financial planning

Nikon has set its vision for 2030 in its mid-term management plan, and has also set mid-term environmental targets for fiscal year 2030 to promote activities such as

decarbonization and resource circulation.

Long-term

(2.1.1) From (years)

7

(2.1.2) Is your long-term time horizon open ended?

Select from:

No

(2.1.3) To (years)

27

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This is a timeline that goes beyond existing strategic and financial plans, but when referring to IPCC scenarios, etc., we mainly refer to fiscal year 2050. In addition, in the environmental field, we have set an Environmental Vision 2050 and set goals from a long-term perspective.

[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both risks and opportunities	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

- Climate change
- Water
- Plastics
- Biodiversity

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- Dependencies

- Impacts

(2.2.2.3) Value chain stages covered

Select all that apply

- Direct operations
- Upstream value chain

(2.2.2.4) Coverage

Select from:

- Full

(2.2.2.5) Supplier tiers covered

Select all that apply

- Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- Qualitative only

(2.2.2.8) Frequency of assessment

Select from:

- Annually

(2.2.2.9) Time horizons covered

Select all that apply

- Short-term
- Medium-term
- Long-term

(2.2.2.11) Location-specificity used

Select all that apply

- National

(2.2.2.12) Tools and methods used

Commercially/publicly available tools

- Encore tool
- WRI Aqueduct

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- Customers
- Employees
- Investors
- Local communities

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

Nikon uses Encore to assess and identify its impact and dependence on natural capital. Nikon has five major businesses, and each business is different from the other. Check the results for the applicable sector for each business. We organize dependencies and impacts based on our own knowledge and experience, focusing on ecosystem services with dependencies and impacts of M or higher. This process targets all offices. The dependence and impact assessment results obtained are considered and integrated in the risk and opportunity management process.

Row 2

(2.2.2.1) Environmental issue

Select all that apply

- Climate change
- Water
- Plastics
- Biodiversity

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

- Risks
- Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- Direct operations
- Upstream value chain
- Downstream value chain

(2.2.2.4) Coverage

Select from:

- Full

(2.2.2.5) Supplier tiers covered

Select all that apply

- Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- Annually

(2.2.2.9) Time horizons covered

Select all that apply

- Short-term
- Medium-term
- Long-term

(2.2.2.10) Integration of risk management process

Select from:

- Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- Site-specific
- National

(2.2.2.12) Tools and methods used

Enterprise Risk Management

- Internal company methods

International methodologies and standards

- IPCC Climate Change Projections

Other

- Scenario analysis

(2.2.2.13) Risk types and criteria considered

Acute physical

- Cyclones, hurricanes, typhoons
- Drought
- Flood (coastal, fluvial, pluvial, ground water)
- Heat waves
- Heavy precipitation (rain, hail, snow/ice)

Chronic physical

- Changing precipitation patterns and types (rain, hail, snow/ice)
- Changing temperature (air, freshwater, marine water)
- Precipitation or hydrological variability
- Sea level rise

Policy

- Carbon pricing mechanisms

Market

- Changing customer behavior
- Uncertainty in the market signals

Reputation

- Increased partner and stakeholder concern and partner and stakeholder negative feedback

Technology

- Transition to increasing renewable content
- Transition to lower emissions technology and products

Liability

- Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

Select all that apply

- NGOs
- Customers
- Employees
- Investors
- Suppliers
- Regulators
- Local communities

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- No

(2.2.2.16) Further details of process

Through the process described below, the Nikon Group evaluates and identifies short-, medium-, and long-term risks and opportunities in the direct operations at all sites and in the value chain, including upstream and downstream. As external information sources, Nikon uses WRI Aqueduct and WWF Biodiversity Risk Filter to identify risk factors related to climate change, water, and biodiversity, mainly at its own sites. In addition, Nikon collects risk and opportunity factors from ISO14001 personnel at each manufacturing site, and in cooperation with the Risk Management Committee chaired by the CRO, integrates the risk factors collected and managed by the Committee from each department. These are evaluated and prioritized by the Environmental Subcommittee, and measures are developed, and the progress is monitored by the Sustainability Committee chaired by the President. Regarding the status of measures, both the Sustainability Committee and the Risk Management Committee work together comprehensively to share information. At Nikon, scenario analysis is used to evaluate risks and opportunities. External scenarios are used to evaluate the likelihood and scale of financial impacts, such as declines in asset value and sales. Nikon's Sustainability Committee monitors the progress of activities based on the company's sustainability policy, which requires that the company constantly and objectively evaluate the impact of its operations on the environment.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

Yes

(2.2.7.2) Description of how interconnections are assessed

In the assessment of risks and opportunities, we take the results of the assessment of dependencies and impacts into account. For example, Nikon's major dependency on nature is surface water and groundwater. This is treated as a prerequisite in the risk and opportunity assessment and identification process. In addition, there are often cases where the drivers of risks and opportunities are the same, and it is expected that countermeasures will have a synergistic effect.

[Fixed row]

(2.3) Have you identified priority locations across your value chain?

(2.3.1) Identification of priority locations

Select from:

Yes, we are currently in the process of identifying priority locations

(2.3.2) Value chain stages where priority locations have been identified

Select all that apply

Direct operations

(2.3.3) Types of priority locations identified

Sensitive locations

Areas important for biodiversity

Areas of limited water availability, flooding, and/or poor quality of water

(2.3.4) Description of process to identify priority locations

Using WWF's Biodiversity Risk Filter, Nikon conducts reputational and physical risk analysis for each of Nikon's major global operating regions. In addition, we conducted water risk assessments using Aqueduct and so on for our main production bases and the operating areas of important tier 1 suppliers. Based on these results, we are identifying important areas from the perspective of dependence on nature, impacts, risks, and opportunities.

(2.3.5) Will you be disclosing a list/spatial map of priority locations?

Select from:

No, we do not have a list/geospatial map of priority locations

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

Qualitative

Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

Revenue

(2.4.3) Change to indicator

Select from:

% decrease

(2.4.4) % change to indicator

Select from:

Less than 1%

(2.4.6) Metrics considered in definition

Select all that apply

- Time horizon over which the effect occurs

(2.4.7) Application of definition

The climate change related risk is specified and evaluated by taking into account comprehensively the characteristics of our business, the location conditions of our manufacturing facilities, the level and frequency of environmental disasters caused by climate change, the trends of industry, the trends of relating laws and so on. Regarding the scale of impact, we consider 0.1% or more of sales to be a significant impact. Even within this serious impact, we have set thresholds of 10 billion yen and 1 billion yen to determine the magnitude of the impact. Another factor to consider is the time frame in which the impact will occur. We recognize the impacts that could occur over the long term (2050) as reported in 2.1 as serious impacts, and determine the level of urgency by setting thresholds of 3 and 10 years.

Opportunities

[Add row]

(2.5) Does your organization identify and classify potential water pollutants associated with its activities that could have a detrimental impact on water ecosystems or human health?

(2.5.1) Identification and classification of potential water pollutants

Select from:

- Yes, we identify and classify our potential water pollutants

(2.5.2) How potential water pollutants are identified and classified

The Nikon Group has established hazardous chemical substance guidelines to identify and manage chemical substances that have a particularly large impact on the global environment and the human body. In particular, for substances that affect water quality, we identify and classify hazardous substances stipulated by laws such as the Water Pollution Control Law and the PRTR Law as potential water pollutants. In addition, at all bases that handle these chemical substances, we list and ascertain the chemical substances used. In particular, whether a substance is a hazardous substance that may cause water pollution is determined based on whether it is a substance designated by the national government or the local government in the area where the business establishment is located. The evaluation indicator is the concentration of those substances in the wastewater. We manage water quality by setting voluntary standards that are stricter than the standards in the areas where our offices are located. Specifically, we monitor wastewater for lead, fluorine, BOD, SS (suspended solids), pH, water temperature, etc. at least once a month, and adhere to our voluntary standards that are stricter than the law.
[Fixed row]

(2.5.1) Describe how your organization minimizes the adverse impacts of potential water pollutants on water ecosystems or human health associated with your activities.

Row 1

(2.5.1.1) Water pollutant category

Select from:

Nitrates

(2.5.1.2) Description of water pollutant and potential impacts

The Nikon Group, which performs the plating process, has identified nitrates as water pollutants. In addition, the potential impact is recognized as follows with reference to the SDS. Nitrates: If contained in drinking water in large amounts, it may cause methemoglobinemia, which inhibits the oxygen-carrying capacity of blood, and may harm human health.

(2.5.1.3) Value chain stage

Select all that apply

Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

Beyond compliance with regulatory requirements

(2.5.1.5) Please explain

Nitric acid is used in the process at production bases that carry out plating. Since the nitric acid used is batch-processed, it is not discharged into waste water. We monitor regularly to make sure we don't exceed it. At production sites that use nitric acid, the success rate is determined by compliance with voluntary standards that are stricter than the legal requirements.

Row 2

(2.5.1.1) Water pollutant category

Select from:

- Inorganic pollutants

(2.5.1.2) Description of water pollutant and potential impacts

The Nikon Group, which manufactures optical glass, has identified inorganic compounds such as lead and lead compounds, fluorine and fluorine compounds, arsenic and arsenic compounds, boron and boron compounds, hexavalent chromium compounds, and chromium and chromium compounds as water pollutants. increase. In addition, we are aware of their potential impact by referring to the SDS.example)Fluorine and fluorine compounds: May accumulate in the environment and be carcinogenic.Boron and Boron Compounds: Serious eye damage or eye irritation.Chromium and Chromium Compounds: Highly toxic heavy metals. Carcinogenic.

(2.5.1.3) Value chain stage

Select all that apply

- Direct operations

(2.5.1.4) Actions and procedures to minimize adverse impacts

Select all that apply

- Beyond compliance with regulatory requirements
- Reduction or phase out of hazardous substances

(2.5.1.5) Please explain

At production sites that use these water pollutants (inorganic compounds), we have established voluntary standards that are even stricter than the legally stipulated limits, and properly treat and discharge wastewater in-house. We also regularly monitor whether water pollutants in wastewater are within our voluntary standards.At production sites that use these substances, the success rate is determined by compliance with voluntary standards that are stricter than the legal requirements.

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Water

(3.1.1) Environmental risks identified

Select from:

Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

Evaluation in progress

(3.1.3) Please explain

*Evaluation is in progress.
[Fixed row]*

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Acute physical

Cyclone, hurricane, typhoon

(3.1.1.4) Value chain stage where the risk occurs

Select from:

Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

Thailand

(3.1.1.9) Organization-specific description of risk

Abnormal weather due to climate change can damage manufacturing plants and production equipment. For example, Nikon (Thailand) Co., Ltd. is the main production

facility for our imaging business, which accounts for about 33% of the total sales of the Nikon Group. Approximately 50% of the digital single-lens reflex camera (SLR) cameras, interchangeable lens and compact digital cameras are manufactured there. In 2011, the prolonged heavy rain caused a large flood around the Chao Phraya River basin, and the company located in the Rojana Industrial Park in Ayuttahaya Province also flooded, greatly damaging facilities and equipment. The operation was suspended for about three months and the amount of property damage was about 12.5 billion yen. The Chao Phraya River Basin is a region where heavy rains and floods are likely to occur in the rainy season due to the influence of monsoon, but the frequency of extreme heavy rainfall is increasing because of the influence of climate change and large flood risk is increasing.

(3.1.1.11) Primary financial effect of the risk

Select from:

- Decreased revenues due to reduced production capacity

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- Short-term
- Medium-term
- Long-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- Very likely

(3.1.1.14) Magnitude

Select from:

- High

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Abnormal weather due to climate change can damage manufacturing plants and production equipment. For example, Nikon (Thailand) Co., Ltd. is the main production facility for our imaging business, which accounts for about 33% of the total sales of the Nikon Group. Approximately 50% of the digital single-lens reflex camera (SLR) cameras, interchangeable lens and compact digital cameras are manufactured there. In 2011, the prolonged heavy rain caused a large flood around the Chao Phraya

River basin, and the company located in the Rojana Industrial Park in Ayuttahaya Province also flooded, greatly damaging facilities and equipment. The operation was suspended for about three months and the amount of property damage was about 12.5 billion yen. The Chao Phraya River Basin is a region where heavy rains and floods are likely to occur in the rainy season due to the influence of monsoon, but the frequency of extreme heavy rainfall is increasing because of the influence of climate change and large flood risk is increasing.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

0

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

12500000000

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

0

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

12500000000

(3.1.1.23) Anticipated financial effect figure in the long-term – minimum (currency)

0

(3.1.1.24) Anticipated financial effect figure in the long-term – maximum (currency)

12500000000

(3.1.1.25) Explanation of financial effect figure

The amount of property damage that Nikon (Thailand) Co., Ltd. suffered due to the flood in 2011 was about 12.5 billion. Since the entire production line was submerged, the breakdown of the amount of property damage includes replacement of equipment, cleaning costs after flood, and restoration costs for molds for exterior parts of cameras. The molds are the embodiment of our group's technology, and it is impossible to manufacture products without the molds. Generally, the price of each mold is several million yen, and more than 300 molds were submerged during this flood, making it unusable. In the future, a large flood may cause the same financial impact.

(3.1.1.26) Primary response to risk

Policies and plans

- Use risk transfer instruments

(3.1.1.27) Cost of response to risk

600000000

(3.1.1.28) Explanation of cost calculation

The establishment of Nikon Laos cost about 600,000,000 yen and the breakdown is as follow as; about 60% is factory construction cost, about 10% is equipment introduction cost, and about 30% is personnel cost. In the future, if the climate change becomes more serious and the risk of flooding increases in other areas, further diversification of production facilities will be required. In this case, it is expected to cost at least as much as the establishment of Nikon La o Co., Ltd.

(3.1.1.29) Description of response

In the Nikon Group, the production plant in Thailand is the only production base with high flood risk at this moment. As a result of our experience with this damage caused by flooding in 2011, we have started to implement plant maintenance countermeasures such as installing critical equipment on the second floor of the buildings and dispersing production equipment to multiple locations among other measures, at this plant. In addition, since 2013, we have established Nikon Lao Co., Ltd. to disperse some parts of our production processes of this plant. In fact, since 2012, when the measures were taken, the water level increased due to heavy rain in Thailand. However, there was no long-term production suspension or disruption of the distribution network, therefore, we consider the risk could be reduced.

(3.5.1) Select the carbon pricing regulation(s) which impact your operations.

Select all that apply

Japan carbon tax

(3.5.3) Complete the following table for each of the tax systems you are regulated by.

Japan carbon tax

(3.5.3.1) Period start date

04/01/2023

(3.5.3.2) Period end date

03/31/2024

(3.5.3.3) % of total Scope 1 emissions covered by tax

83

(3.5.3.4) Total cost of tax paid

6800000

(3.5.3.5) Comment

*The Nikon Group has many bases in Japan, and the use of fuel at those bases is indirectly affected by the Global Warming Countermeasure Tax.
[Fixed row]*

(3.5.4) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Nikon's strategy 1) We will regularly implement highly energy-saving measures (air conditioning equipment, ventilation equipment, power receiving and transforming equipment, power distribution equipment, lighting equipment, and other infrastructure equipment) and constantly strive to save energy. 2) If it is difficult to reduce energy consumption due to increased production, etc., use the acquired energy certificate. 3) Sign up for a renewable electricity plan and purchase electricity with a low CO2

emission factor Case study of energy planning Our company is promoting the introduction of renewable energy because we feel that there are limits to achieving the world's CO2 reduction goals through our own energy consumption reduction efforts alone. In fiscal 2023, the introduction rate of renewable energy will reach 69.3%. In introducing this renewable energy, we utilize internal carbon pricing. In the future, we would like to roll out similar renewable energy power generation plans to other group companies.

(3.6) Have you identified any environmental opportunities which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

	Environmental opportunities identified
Climate change	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, we have identified opportunities, and some/all are being realized
Water	<i>Select from:</i> <input checked="" type="checkbox"/> Yes, we have identified opportunities, and some/all are being realized

[Fixed row]

(3.6.1) Provide details of the environmental opportunities identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.6.1.1) Opportunity identifier

Select from:

Opp1

(3.6.1.3) Opportunity type and primary environmental opportunity driver

Markets

- Expansion into new markets

(3.6.1.4) Value chain stage where the opportunity occurs

Select from:

- Downstream value chain

(3.6.1.5) Country/area where the opportunity occurs

Select all that apply

- Japan
- United States of America

(3.6.1.8) Organization specific description

Nikon has technology cultivated over many years in the imaging business and precision equipment business. In recent years, we have been working in the field of precision processing using optical processing machines that employ our unique technology. For example, we are working on the practical application of riblet processing technology, which reduces frictional resistance by applying microfabricated shark-skin-like textures to the surface of objects using optical processing machines. If this technology is applied to aircraft, etc., it is expected to reduce CO2 emissions by reducing air resistance and improving fuel efficiency. In addition, metal 3D printers can process materials without any yield loss, so they can be expected to reduce CO2 emissions over the entire lifecycle. As society continues to transition to net zero, the market for such microfabrication is expected to expand, leading to business opportunities for Nikon.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- Increased revenues resulting from increased demand for products and services

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- Medium-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

Very likely (90–100%)

(3.6.1.12) Magnitude

Select from:

High

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

These fields are included in Digital Manufacturing in Nikon's portfolio and are expected to contribute to Nikon's operating income over the medium to long term.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

(3.6.1.19) Anticipated financial effect figure in the medium-term - minimum (currency)

0

(3.6.1.20) Anticipated financial effect figure in the medium-term - maximum (currency)

5000000000

(3.6.1.23) Explanation of financial effect figures

Nikon's digital manufacturing business, which is affected by opportunities due to climate change, is expected to generate operating income of 5 billion yen in fiscal 2030.

(3.6.1.24) Cost to realize opportunity

120000000000

(3.6.1.25) Explanation of cost calculation

The company is planning strategic investments such as M&A to commercialize the digital manufacturing business. Nikon is planning a strategic investment of 120 billion yen for capital allocation in its medium-term management plan for fiscal 2022 to 2025.

(3.6.1.26) Strategy to realize opportunity

In riblet processing, we aim to scale up the process by 2030. For metal 3D printers, Nikon SLM Solutions' strategy is to become a market leader through close collaboration with key customers and the development of next-generation platforms.

Water

(3.6.1.6) River basin where the opportunity occurs

Select all that apply

Chao Phraya

(3.6.1.8) Organization specific description

Nikon Sagamihara Plant manufactures optical glass used in semiconductor lithography system and FPD (flat panel display) exposure equipment, which is a precision machinery business that accounts for approximately 31% of the Nikon Group's sales. In addition, Nikon Sagamihara Plant is the third largest water withdrawal factory in the Nikon Group. It uses about 687 megaliters of water resources annually. Among them, the process that uses a lot of water resources is the exhaust gas cleaning process that dissolves and removes the acid component contained in the exhaust gas when manufacturing glass in water. Therefore, Sagamihara Plant has introduced a mechanism to collect, recycle, and reuse the cleaning water used in the exhaust gas cleaning equipment. As a result, about 60% of the water used in the cleaning process circulates.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- Reduced indirect (operating) costs

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

- Likely (66–100%)

(3.6.1.12) Magnitude

Select from:

- Medium

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

This process accounts for a large proportion of water consumption in Nikon's business, and incurs business costs associated with water intake and water purification after use.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

0

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

190000000

(3.6.1.23) Explanation of financial effect figures

The possible financial cost is the reduced sewerage charge due to water reuse/recycle. There is no reduction in water charge as the process uses ground water.

(3.6.1.24) Cost to realize opportunity

0

(3.6.1.25) Explanation of cost calculation

There is no additional cost spent because the measure is being taken as a part of the regular management.

(3.6.1.26) Strategy to realize opportunity

Sagamihara Plant has introduced a mechanism to collect, recycle, and reuse the cleaning water used in the exhaust gas cleaning equipment. As a result, about 60% of the water used in the cleaning process circulates. Optical glass is Nikon's core business and is used in all Nikon products. Therefore, we believe that reducing the amount of water intake at the Sagamihara Plant will lead to improved water efficiency and reduced environmental impact for all products handled by the Nikon Group.
[Add row]

(3.6.2) Provide the amount and proportion of your financial metrics in the reporting year that are aligned with the substantive effects of environmental opportunities.

Climate change

(3.6.2.1) Financial metric

Select from:

Revenue

(3.6.2.2) Amount of financial metric aligned with opportunities for this environmental issue (unit currency as selected in 1.2)

59900000000

(3.6.2.3) % of total financial metric aligned with opportunities for this environmental issue

Select from:

1-10%

(3.6.2.4) Explanation of financial figures

Revenue of digital manufacturing business. In recent years, we have been working in the field of precision processing using optical processing machines that employ our unique technology. For example, we are working on the practical application of riblet processing technology, which reduces frictional resistance by applying microfabricated shark-skin-like textures to the surface of objects using optical processing machines. If this technology is applied to aircraft, etc., it is expected to reduce CO2 emissions by reducing air resistance and improving fuel efficiency. In addition, metal 3D printers can process materials without any yield loss, so they can be expected to reduce CO2 emissions over the entire lifecycle. As society continues to transition to net zero, the market for such microfabrication is expected to expand, leading to business opportunities for Nikon.

(4.1.2) Identify the positions (do not include any names) of the individuals or committees on the board with accountability for environmental issues and provide details of the board's oversight of environmental issues.

Climate change

(4.1.2.1) Positions of individuals or committees with accountability for this environmental issue

Select all that apply

- Director on board
- Chief Operating Officer (COO)
- President

(4.1.2.2) Positions' accountability for this environmental issue is outlined in policies applicable to the board

Select from:

- Yes

(4.1.2.3) Policies which outline the positions' accountability for this environmental issue

Select all that apply

- Board Terms of Reference

(4.1.2.4) Frequency with which this environmental issue is a scheduled agenda item

Select from:

- Scheduled agenda item in some board meetings – at least annually

(4.1.2.5) Governance mechanisms into which this environmental issue is integrated

Select all that apply

- Overseeing and guiding scenario analysis
- Overseeing the setting of corporate targets
- Monitoring progress towards corporate targets
- Approving corporate policies and/or commitments
- Approving and/or overseeing employee incentives
- Monitoring the implementation of a climate transition plan
- Overseeing and guiding the development of a business strategy

(4.1.2.7) Please explain

The person responsible for climate change is the Representative Director, President and COO. Nikon Group holds a Sustainability Committee, chaired by the President, at least twice a year to set goals for sustainability initiatives, including the environment, draw up plans, check progress, confirm the achievement of goals, and give instructions for improvement as necessary. If goals are not achieved, the relevant committee is asked to clarify the reason and measures are taken to achieve the goals for the following year. The head of the Sustainability Department in the Secretariat, who is also a member of the Committee, reports the progress for each fiscal year to the Board of Directors every year. In addition, the head of the Sustainability Department proposes the formulation and updating of important policies and goals at each Board of Directors meeting. The Board of Directors makes comprehensive decisions on the Nikon Group's important issues, including climate change, and reviews the progress of initiatives, important issues, and goals. The Representative Director and President has the authority and responsibility for final approval of plans, issues, and progress of goals regarding climate change issues. In this process, trade-offs such as increases in business costs and investments and the need to achieve goals are taken into consideration. As an example of decision-making, based on this process, we have decided to review renewable energy in fiscal 2023 and bring forward

our goal of achieving 100% coverage to fiscal 2030.

(4.5.1.3) Performance metrics

Targets

- Reduction in absolute emissions in line with net-zero target

Emission reduction

- Implementation of an emissions reduction initiative

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- Both Short-Term and Long-Term Incentive Plan, or equivalent

(4.5.1.5) Further details of incentives

We started to link sustainability challenge KPIs to officer compensation. In the evaluation of performance stock units, the achievement of strategic KPIs is taken into account, which encompasses the achievement of the company's targets for decarbonization. Additionally, some of the sustainability-related KPIs set by business units that are taken into account in the evaluation of short-term bonuses include those related to climate change.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

We are committing to achieving net-zero emission by FY2050 and have positioned the GHG reduction targets of Nikon's mid-term environmental goals, which have been certified for SBT at the 1.5C level, as an important element of the transition plan. This incentives ensure the achievement of Nikon's Mid-Term Environmental Targets and make a significant contribution to the implementation of the Transition Plan.

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

- Both Short-Term and Long-Term Incentive Plan, or equivalent

(4.5.1.5) Further details of incentives

We have started linking KPIs for sustainability issues and executive compensation. PSU evaluations consider the achievement of strategic KPIs, including meeting targets for reducing water consumption and reducing chemical emissions. In addition, some of the sustainability-related KPIs set by business units that are taken into account in short-term bonus evaluations include water-related items.

(4.5.1.6) How the position's incentives contribute to the achievement of your environmental commitments and/or climate transition plan

By 2030, we aim to reduce our freshwater usage by 5% compared to 2018, and to completely eliminate the use of hazardous chemicals (banned substances stipulated by our voluntary guidelines on hazardous chemical substances) in our manufacturing processes. Toward this end, we set goals each year. By working towards achieving these goals, we will contribute to achieving our 2030 goals.

- Water
- Biodiversity

(4.6.1.2) Level of coverage

Select from:

- Organization-wide

(4.6.1.3) Value chain stages covered

Select all that apply

- Direct operations
- Upstream value chain
- Downstream value chain

(4.6.1.4) Explain the coverage

The target companies are clearly defined as Nikon Corporation and its domestic and overseas subsidiaries. In addition, environmental considerations are specified in each life cycle, and the aim is to minimize the environmental burdens both upstream and downstream of the value chain.

(4.6.1.5) Environmental policy content

Environmental commitments

- Commitment to No Net Loss
- Commitment to a circular economy strategy
- Commitment to comply with regulations and mandatory standards
- Commitment to take environmental action beyond regulatory compliance
- Commitment to avoidance of negative impacts on threatened and protected species
- Commitment to stakeholder engagement and capacity building on environmental issues
- Commitment to implementation of nature-based solutions that support landscape restoration and long-term protection of natural ecosystems
- Commitment to engage in integrated, multi-stakeholder landscape (including river basin) initiatives to promote shared sustainability goals

Climate-specific commitments

- Commitment to 100% renewable energy
- Commitment to net-zero emissions

Water-specific commitments

- Commitment to reduce or phase out hazardous substances

- Commitment to control/reduce/eliminate water pollution
- Commitment to reduce water consumption volumes
- Commitment to water stewardship and/or collective action

(4.6.1.6) Indicate whether your environmental policy is in line with global environmental treaties or policy goals

Select all that apply

- Yes, in line with the Paris Agreement
- Yes, in line with the Kunming-Montreal Global Biodiversity Framework
- Yes, in line with Sustainable Development Goal 6 on Clean Water and Sanitation

(4.10) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

(4.10.1) Are you a signatory or member of any environmental collaborative frameworks or initiatives?

Select from:

- Yes

(4.10.2) Collaborative framework or initiative

Select all that apply

- RE100
- UN Global Compact
- Japan Climate Initiative (JCI)
- Japan Climate Leaders' Partnership (JCLP)
- Science-Based Targets Initiative (SBTi)
- Task Force on Climate-related Financial Disclosures (TCFD)

(4.10.3) Describe your organization's role within each framework or initiative

*Actively participate in consensus building in each initiative. They also contribute to policy engagement by participating in opinions sharing.
[Fixed row]*

(4.11) In the reporting year, did your organization engage in activities that could directly or indirectly influence policy, law, or regulation that may (positively or negatively) impact the environment?

(4.11.1) External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the environment

Select all that apply

Yes, we engaged indirectly through, and/or provided financial or in-kind support to a trade association or other intermediary organization or individual whose activities could influence policy, law, or regulation

(4.11.2) Indicate whether your organization has a public commitment or position statement to conduct your engagement activities in line with global environmental treaties or policy goals

Select from:

Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

- Paris Agreement
- Kunming-Montreal Global Biodiversity Framework
- Sustainable Development Goal 6 on Clean Water and Sanitation

(4.11.4) Attach commitment or position statement

sr2023_all.pdf

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

No

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

*At Nikon, we engage with industry groups and government agencies in each country and business. The Sustainability Department is disseminating and educating the entire group on environmental strategies, including climate change, in an effort to unify awareness throughout the group. In addition, contact persons from each organization have inquired about the content of engagement to the sustainability department. Through these, various engagements are aligned with the climate strategy.
[Fixed row]*

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

Indirect engagement via other intermediary organization or individual

(4.11.2.2) Type of organization or individual

Select from:

Non-Governmental Organization (NGO) or charitable organization

(4.11.2.3) State the organization or position of individual

We belong to Japan Climate Initiative (JCI). We endorse their message “JCI calls on the Japanese government to set an ambitious 2035 target that is consistent with the 1.5-degree goal.” For example, this indicates that Japan needs the NDC to reduce GHGs by 66% or more in 2035 and the 7th Strategic Energy Plan should be designed to achieve this goal.

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

Yes, we publicly promoted their current position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

Nikon agrees with the above message and has the same way of thinking. We participate in discussions with the above organizations so that our stance can be reflected.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

0

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

Yes, we have evaluated, and it is aligned

(4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

Paris Agreement

Row 2

(4.11.2.1) Type of indirect engagement

Select from:

- Indirect engagement via a trade association

(4.11.2.4) Trade association

Asia and Pacific

- Other trade association in Asia and Pacific, please specify :Japan Electronics and Information Technology Industries Association (JEITA)

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

- Climate change
- Water

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

- Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

- Yes, we publicly promoted their current position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

JEITA promotes activities that will make the electronics industry a driving force in economic growth and a virtuous green cycle toward the realization of carbon neutrality and SDGs. Nikon supports this idea and participates in related committee activities, thereby influencing the formation of JEITA's stance.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

- Yes, we have evaluated, and it is aligned

(4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

- Paris Agreement
 Sustainable Development Goal 6 on Clean Water and Sanitation

[Add row]

(4.12) Have you published information about your organization's response to environmental issues for this reporting year in places other than your CDP response?

Select from:

- Yes

(4.12.1) Provide details on the information published about your organization's response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.

Row 1

(4.12.1.1) Publication

Select from:

- In mainstream reports, in line with environmental disclosure standards or frameworks

(4.12.1.2) Standard or framework the report is in line with

- 2050

(5.1.1.9) Driving forces in scenario

Stakeholder and customer demands

- Consumer sentiment

Regulators, legal and policy regimes

- Global regulation

Direct interaction with climate

- On asset values, on the corporate

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

-Parameters Degree of increase in business costs due to taxation on our company and suppliers due to the introduction of carbon tax -Assumptions By 2050 as a long-term impact, 2030 as a medium-term impact, and 2025, the final year of the medium-term management plan starting in 2022, carbon tax will be introduced in countries and regions where major business activities are carried out and will be introduced to the company. It is assumed that the taxation of the business will increase the business cost and the taxation of the supplier will be reflected in the purchase cost. -Analytical choice As mentioned above, the maturity is 2050, 2030, and 2025. Quoted IEA World Energy Outlook 2022 as a source of carbon prices.

(5.1.1.11) Rationale for choice of scenario

As for the transition risk, we selected a scenario in which decarbonization has progressed significantly and social change has been significant. Of the 1.5 C and 2 C scenarios, we selected the SDS, which has easy access to related parameters such as carbon tax.

Water

Local ecosystem asset interactions, dependencies and impacts

- Changes to the state of nature

Direct interaction with climate

- On asset values, on the corporate

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

Parameters We have estimated the financial impact of an increase in the probability of natural disasters such as typhoons and floods, and an increase in electricity costs due to a rise in average temperature. *Preconditions* As a medium-term impact, it is assumed that by 2030 and 2025, the final year of the medium-term management

plan, temperature rise will become evident and the number of weather disasters will increase. Analytical selection The probability and scale of flood occurrence were estimated from the WRI Aqueduct.

(5.1.1.11) Rationale for choice of scenario

When considering risks due to changes in water availability, we believe that this is useful for assessing physical risks because it shows scenarios in which the impact will be large.

[Add row]

(5.1.2) Provide details of the outcomes of your organization's scenario analysis.

Climate change

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

- Risk and opportunities identification, assessment and management

- Resilience of business model and strategy
- Capacity building
- Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

- Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

In the physical risk analysis, risk factors were extracted from two perspectives: acute risk and chronic risk. For acute risk, we recognize that an increase in typhoons and other extreme weather events is a factor with a large impact scale and probability of occurrence, since factories with large production scale are located in Japan and Thailand. As a chronic risk, we recognize the impact of rising temperatures. Semiconductor and FPD lithography equipment, our core products, can only be manufactured in clean rooms maintained at 23C 0.5C. Therefore, if average temperatures rise due to climate change, it will be more difficult to control air conditioning temperatures and costs will increase. In the analysis of transition risk, risk factors were identified in terms of "policy and regulation," "technology," "market," and

"reputation." Under "Policy and Regulation," the factors identified include the introduction of carbon taxes and other carbon pricing policies, as well as higher electricity prices due to changes in energy policy. Most of our business bases are located in Japan. It is expected that tighter carbon pricing policies and changes in the energy mix will affect electricity prices. In addition, in our supply chain, we expect the impact to be greater upstream, as the majority of our emissions are in the upstream sector, such as Scope 3 Category 1. With regard to "technology," GHG emissions from the use stage of semiconductor and FPD lithography equipment, our core products, are the largest, affecting customer costs. reduction is important, and we are aware of the risk of such technological competition. In addition, we have material manufacturing processes, and we recognized that if we cannot catch up with the decarbonization of manufacturing methods and materials, we will lose sales opportunities. Regarding "market" and "reputation," the Company recognized the impact of reduced sales opportunities due to failure to meet customers' demand for decarbonization and the impact of existing reputation and reputation on its stock price and sales. Based on the above analysis, we considered the impact on management. For example, in FY2022, we considered the above impacts as a component of the financial simulation in the new mid-term business plan through 2025. The results confirmed that the likelihood of impacts occurring at a level requiring financial treatment was small. From the perspective of integrating the mid-term business plan and climate change strategy, we considered reflecting risk events of a certain scale and urgency in the financial statements but confirmed that reflection is not necessary at this time because the likelihood of their occurrence is not high. Verification will continue in the future, as the period during which physical risks are manifested is short. Also, in FY2023, we decided to set our net zero target according to result of scenario analysis.

Verification will continue in the future, as the period during which physical risks are manifested is short. Also, in FY2023, we decided to set our annual target for freshwater consumption according to result of scenario analysis.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

Yes, we have a climate transition plan which aligns with a 1.5°C world

(5.2.3) Publicly available climate transition plan

Select from:

Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

No, and we do not plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

Nikon is proceeding with the determination of the impact of commitments, recognizing that there is not a strong relationship between expenditures and revenue generation for activities that lead to the expansion of fossil fuels due to the nature of the business.

(5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

We have a different feedback mechanism in place

(5.2.8) Description of feedback mechanism

Nikon widely publishes transition plans such as its long-term environmental vision and medium-term environmental targets on its website and media such as sustainability reports. As a result, various stakeholders can view it, and if there is an opinion, feedback can be received from departments such as shareholder relation and investor relation. In addition, we hold meeting with Investors regularly. In the meeting, we explain them our plan and receive feedback from them.

(5.2.9) Frequency of feedback collection

Select from:

Annually

(5.2.10) Description of key assumptions and dependencies on which the transition plan relies

According to its transition plan, Nikon aims to decarbonize value chain in line with society, based on the premise that the transition in whole society. On this, progress of transition is assumed with 1.5 to 2 degrees Celsius in terms of market and regulatory trends. Nikon's transition plan depends on a trend of social rules and frameworks. For example, we recognize that achieving net zero requires social consensus on the use of credit and that it is reasonably available. Furthermore, collaboration with stakeholders such as suppliers and customers is essential to achieving net zero, including Scope 3.

(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period

In fiscal 2023, we received SBT certification for our net zero target and clarified our long-term strategy. In addition, the renewable energy rate was approximately 69%, mainly at large-scale production bases in Japan and overseas.

(5.2.12) Attach any relevant documents which detail your climate transition plan (optional)

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

1. Opportunities related to the equipment miniaturization needed for transition to a low carbon society have impacted our strategy for products and services. 2. Demand for energy saving of electronic devices is expected to increase in the future. Miniaturization of electronic devices is very effective in saving energy, and semiconductors are required "ultra-low power consumption". It is a task for semiconductor lithography system business to develop technology to efficiently form finer circuits. Therefore, our precision equipment business, which manufactures semiconductor exposure equipment, has decided to invest in research and development to promote further miniaturization technology, and been promoting development. This is the most substantial strategic decision made in "Products and services" area. The immersion lithography technology developed by the Nikon Group's precision equipment business can be mounted without changing the principle and basic structure of conventional semiconductor lithography system and meet the demand for IC evolution. It can also contribute to energy saving by increasing the degree of integration and miniaturization of the IC. With such technology, Nikon Group can meet the need for miniaturization of equipment required for low-carbon society. The magnitude of the impact of this opportunity on our business revenue is significant, because it leads to an increase in the market share of precision equipment business products, which accounts for approximately 40% of Nikon Group's sales. Within the next three years, we will drive development toward expanding existing device platforms and launch immersion lithography systems compatible with 5nm-generation devices.

Select all that apply

Climate change

Water

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

1. The risks associated with rising average temperatures have impacted our strategy for operating the Precision Equipment business. 2. One of the Group's main products, semiconductor lithography system, can be manufactured only in a clean room maintained at 23C ±0.5C. If the average temperature rises due to climate change, the cost for air-conditioning temperature control may increase significantly. Energy use in clean rooms accounts for about one-third of the Group's energy use,

so its impact is not small. Therefore, we have positioned energy saving as an important measure in our group. In particular, we are intensively working on energy-saving measures at manufacturing sites that own clean rooms. This is the most substantial strategic decision made in “Operations” area. Specifically, the inside of the clean room is divided appropriately, temperature control is performed for each area, and night-time air conditioning operation is partially stopped in possible areas. In addition, the air conditioning heat source unit was updated to enable more efficient temperature control. Furthermore, based on the heat source monitoring data (heat quantity of cold-water production, operating time of each heat source machine, energy consumption), the optimum operation pattern that can suppress the energy consumption without affecting the quality was determined and adapted. By FY 2030, we plan to roll these measures out to other sites related to the precision equipment business.

- Capital allocation
- Acquisitions and divestments

(5.3.2.2) Effect type

Select all that apply

- Risks
- Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

- Climate change
- Water

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

[A case study of how climate related risks and opportunities have influenced our financial planning] The risk and opportunity on the “Access to capital” area have been factored into the ESG investment strategy of the financial planning process over the next 3-5 years. We feel that the consciousness to ESG among the investors has risen recently through the surveys from research institutes and investors. If we could disclose our efforts and information related to climate change fully, the opportunities to be invested may increase. We recognize that proper disclosure of information is our important task. Regarding the implementation of measures and information disclosure related to climate change, we allocate a large number of personnel and working time mainly in the Sustainability section and the environmental section responsible for climate related matters. Government Pension Investment Fund (GPIF), the world's largest pension fund signing PRI in 2015, holds 7.5% of Nikon shares. Therefore, the magnitude of the impact on the “Access to capital” is large. As a result of allocating a lot of resources for information disclosure and striving to respond to the demands of stakeholders such as investors about information disclosure, we have been being included in all ESG indices that GPIF selected for their passive investment since 2018. We continued to be included in the indices in FY 2023.

The Nikon Group has joined RE100 and is aiming for a 100% renewable energy adoption rate by fiscal year 2030. Nikon sees this goal as extremely important in advancing its own transition. To achieve this, Nikon is procuring renewable energy in line with the market and characteristics of each region, and has increased the adoption rate to 69.3% across the group. Nikon sees the OPEX associated with this as being consistent with the transition plan, and expects costs to increase as it approaches fiscal year 2030, when it plans to achieve 100%.

	Investment in low-carbon R&D	Comment
	Select from: <input checked="" type="checkbox"/> Yes	<i>The company is investing in R&D in low-carbon products such as digital manufacturing businesses.</i>

[Fixed row]

(5.5.2) Provide details of your organization’s investments in low-carbon R&D for capital goods products and services over the last three years.

Row 1

(5.5.2.1) Technology area

Select from:

Unable to disaggregate by technology area

(5.5.2.3) Average % of total R&D investment over the last 3 years

10

(5.5.2.4) R&D investment figure in the reporting year (unit currency as selected in 1.2) (optional)

0

(5.5.2.5) Average % of total R&D investment planned over the next 5 years

8

(5.5.2.6) Explain how your R&D investment in this technology area is aligned with your climate commitments and/or climate transition plan

The products of the digital manufacturing business are expected to contribute to the decarbonization of society as a whole, as exemplified by riblet processing, which contributes to reducing CO2 emissions by reducing resistance.

[Add row]

(5.9) What is the trend in your organization's water-related capital expenditure (CAPEX) and operating expenditure (OPEX) for the reporting year, and the anticipated trend for the next reporting year?

(5.9.1) Water-related CAPEX (+/- % change)

46.25

(5.9.2) Anticipated forward trend for CAPEX (+/- % change)

20.09

(5.9.3) Water-related OPEX (+/- % change)

-41.55

(5.9.4) Anticipated forward trend for OPEX (+/- % change)

124.38

(5.9.5) Please explain

This fiscal year, the Nikon Group plans to install large-scale well water purification equipment, and as a result, water-related capital expenditures (CAPEX) are expected to increase significantly compared to the previous reporting year. In addition, a large-scale capital investment to update the hot and cold water generators is planned for next fiscal year, so CAPEX is expected to increase further. Water-related operating expenses (OPEX) for this fiscal year have decreased significantly compared to the previous reporting year. However, OPEX is expected to increase significantly next year due to increased maintenance costs for water purification equipment, etc.

[Fixed row]

(5.10) Does your organization use an internal price on environmental externalities?

	Use of internal pricing of environmental externalities	Environmental externality priced
	<i>Select from:</i> <input checked="" type="checkbox"/> Yes	<i>Select all that apply</i> <input checked="" type="checkbox"/> Carbon

[Fixed row]

(5.10.1) Provide details of your organization's internal price on carbon.

Row 1

(5.10.1.1) Type of pricing scheme

Select from:

- Internal fee

(5.10.1.2) Objectives for implementing internal price

Select all that apply

- Drive low-carbon investment
- Incentivize consideration of climate-related issues in decision making

(5.10.1.3) Factors considered when determining the price

Select all that apply

- Cost of required measures to achieve climate-related targets

(5.10.1.4) Calculation methodology and assumptions made in determining the price

The price of carbon is calculated by the renewable energy certificates cost that Nikon obtains.

(5.10.1.5) Scopes covered

Select all that apply

- Scope 1
- Scope 2

(5.10.1.6) Pricing approach used – spatial variance

Select from:

- Uniform

(5.10.1.8) Pricing approach used – temporal variance

Select from:

- Evolutionary

(5.10.1.9) Indicate how you expect the price to change over time

The carbon price changes depending on the change in the price of the renewable energy certificates that Nikon obtains.

(5.10.1.10) Minimum actual price used (currency per metric ton CO2e)

120

(5.10.1.11) Maximum actual price used (currency per metric ton CO2e)

120

(5.10.1.12) Business decision-making processes the internal price is applied to

Select all that apply

- Capital expenditure
- Operations

(5.10.1.13) Internal price is mandatory within business decision-making processes

Select from:

No

(5.10.1.14) % total emissions in the reporting year in selected scopes this internal price covers

100

(5.10.1.15) Pricing approach is monitored and evaluated to achieve objectives

Select from:

Yes

(5.10.1.16) Details of how the pricing approach is monitored and evaluated to achieve your objectives

Pricing is discussed and decided at the Sustainability Committee meeting in the first half of each fiscal year's budget. In this process, the likelihood of achieving Scope 1 and 2 reduction targets is taken into account.

[Add row]

(5.11) Do you engage with your value chain on environmental issues?

- Not an immediate strategic priority

(5.11.4) Explain why you do not engage with this stakeholder on environmental issues

[Fixed row]

(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?

Climate change

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

- Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

- Contribution to supplier-related Scope 3 emissions

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

- 51-75%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

Defined as a supplier who has not responded to the GHG emissions survey requested of the supplier. We recognize that there is an impact on the environment due to a lack of control over GHG emissions.

(5.11.1.5) % Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

Select from:

1-25%

(5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

16

Water

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

Impact on water availability

Impact on pollution levels

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

76-99%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

The Nikon Group conducts environmental management system assessments every three years for suppliers that handle chemical substances. As a part of this, we confirm whether suppliers manage specified facilities applicable to water quality regulations, and are conducting regular monitoring of wastewater. Non-conforming suppliers for these are defined as those that have a substantive impact on water security. None of our current suppliers have a substantive impact on water security.

(5.11.1.5) % Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

Select from:

None

[Fixed row]

(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?

Climate change

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to climate change

Procurement spend

(5.11.2.4) Please explain

The Nikon Group prioritizes supplier engagement based on transaction value to address climate change. Based on the transaction amount, we estimate the supplier's GHG emissions resulting from transactions with Nikon.

Water

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

- In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to water
- Material sourcing
- Procurement spend

(5.11.2.4) Please explain

The Nikon Group conducts environmental management system assessments every three years for suppliers that handle chemical substances, depending on the risks associated with chemical substances contained in the materials and parts they handle and those used in processes. As a part of this assessment, we confirm whether suppliers are appropriately managing specified facilities applicable to water quality regulations, and whether they are conducting regular monitoring of wastewater. Non-conforming suppliers for these items are defined as those that have a substantive impact on water security.

[Fixed row]

(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization’s purchasing process?

Select from:

- 76-99%

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Conduct environmental audits of targeted suppliers, including climate change issues, and collect environmental information. As a measure of success, the company has set a target to audit all targeted suppliers and collect information on climate change and carbon by FY2026, and checks the percentage of suppliers that have been audited and collected carbon information each year. If any nonconformity is found as a result of the audit, the supplier is requested to correct the nonconformity. For suppliers that are not required to report to the national or local government, we provide guidance on how to calculate CO emissions and support them in identifying emissions and setting targets. We certify suppliers that meet the requirements of the environmental management system stipulated in the Nikon Green Procurement Standards as "Nikon Environmental Partners" and count the number of such suppliers as an indicator. In addition, certified suppliers are subject to a renewal audit once every three years to regularly check whether they meet the requirements to become a Nikon Procurement Partner.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental

issue

Select from:

Yes, please specify the environmental requirement :GHG Reporting

engagement

Select from:

None

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Based on the "Nikon Green Procurement Basic Policy", the Nikon Group requires suppliers to actively work on environmental conservation as a condition of doing business. After that, we request all suppliers to comply with the "Nikon Green Procurement Standards", build the environmental management systems ("Management System for Environmental Conservation" and "Management System for Chemical Substances in products"), and operate appropriately these systems. The Management System for Environmental Conservation includes consideration of water resources in business activities. We also conduct environmental management system surveys or environmental management system audit every three years according to the environmental risks of each supplier. Through these processes, we collect information on the environmental management system, including the supplier's water, and the status of wastewater quality management. The percentage of suppliers covered by this initiative is approximately 67% of the total number of suppliers. We define suppliers with poor wastewater quality management as having a significant impact, and we currently do not do business with such suppliers. The indicators for measuring the impact and results of this supplier engagement are the status of the supplier's environmental management system construction and the status of certification as a Nikon Environmental Partner. Currently, approximately 80% of the suppliers that have conducted the "environmental management system survey" and "environmental management system assessment" have obtained third-party certification of their environmental management systems. In addition, the Nikon Group certifies suppliers that meet the requirements set forth in the Nikon Green Procurement Standards as Nikon Environmental Partners. Even after accreditation, we conduct regular renewal examinations. In fiscal 2022, 31 new suppliers were certified as Nikon Environmental Partners, and 180 companies renewed their certification. The total number of Nikon Environmental Partners among the suppliers with whom we are currently doing business is 456.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

Yes, please specify the environmental requirement :Monitoring water pollution

(6.1.2) Provide the rationale for the choice of consolidation approach

The Group's management is consistent with financial accounting. This is because we believe that the financial control standard is close to the definition of a "subsidiary" in Japan and is suitable for controlling the emissions of the entire group.

[Fixed row]

C7. Environmental performance - Climate Change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

(7.1.1.1) Has there been a structural change?

Select all that apply

Yes, an acquisition

(7.1.1.2) Name of organization(s) acquired, divested from, or merged with

SLM Solutions Group AG

(7.1.1.3) Details of structural change(s), including completion dates

From January 27, 2023, SLM Solutions Group AG will join the Nikon Group, and the company name will change to "Nikon SLM Solutions AG." Co2 emissions have been added from FY2023. Nikon SLM Solutions AG's Co2 emissions account for 1.87% of Nikon's total emissions, so the impact on the Nikon Group as a whole is minimal.

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

(7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

Select all that apply

- Yes, a change in boundary

(7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

From fiscal 2023, Nikon SLM Solutions AG has been added to the boundary. Nikon SLM Solutions AG's CO2 emissions account for 1.87% of Nikon's total emissions, so the impact on the Nikon Group as a whole is minimal.

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

- Yes

(7.1.3.2) Scope(s) recalculated

Select all that apply

- Scope 1
- Scope 2, location-based
- Scope 2, market-based

(7.1.3.3) Base year emissions recalculation policy, including significance threshold

The base year has been changed from FY2013 to FY2022, but the figures for FY2022 remain unchanged.

(7.1.3.4) Past years' recalculation

Select from:

No

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

Japan Ministry of the Environment, Law Concerning the Promotion of the Measures to Cope with Global Warming, Superseded by Revision of the Act on Promotion of Global Warming Countermeasures (2005 Amendment)

The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

(7.3.1) Scope 2, location-based

Select from:

We are reporting a Scope 2, location-based figure

(7.3.2) Scope 2, market-based

Select from:

We are reporting a Scope 2, market-based figure

(7.3.3) Comment

For the market-based value, CO2 emission factors for purchased electric power are as follows. The value after deducting the Green Power Certificate and Green Power Plan.- In Japan: The CO2 emission factor factors without adjustment for each electric power utility, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures.- USA and UK: Residual Mix CO2 emission factor- The other countries: International Energy Agency (IEA) CO2 emission factors. For the location-based value, CO2 emission factors for purchased electric power are as follows.- Japan: The average value for all the electric power utilities in Japan, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures, not the substitute value in the list.- Outside Japan: International Energy Agency (IEA) CO2 emission factors.

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?

Select from:

Yes

(7.4.1) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.

Row 1

(7.4.1.1) Source of excluded emissions

Group sales subsidiaries outside Japan

(7.4.1.2) Scope(s) or Scope 3 category(ies)

Select all that apply

Scope 1

Scope 2 (location-based)

Scope 2 (market-based)

(7.4.1.3) Relevance of Scope 1 emissions from this source

Select from:

Emissions are not relevant

(7.4.1.4) Relevance of location-based Scope 2 emissions from this source

Select from:

Emissions are not relevant

(7.4.1.5) Relevance of market-based Scope 2 emissions from this source

Select from:

Emissions are not relevant

(7.4.1.8) Estimated percentage of total Scope 1+2 emissions this excluded source represents

3.1

(7.4.1.10) Explain why this source is excluded

Because the excluded emissions of Group sales subsidiaries outside Japan amounted to only 3.13% of the total combined Scope 1 2 emissions on the location-based, it was considered that there would be no impact on overall reporting. The Nikon Group counts the Nikon Group in Japan and Group manufacturing companies outside Japan as a 100% boundary.

(7.4.1.11) Explain how you estimated the percentage of emissions this excluded source represents

From (7.6)and(7.7) the 'reporting year emissions' is 202,309.97 tCO₂(28,311.45tCO₂173,998.52 tCO₂) on the location-based. The excluded emissions of Group sales subsidiaries outside Japan are aggregated values obtained from each business site in the form of a questionnaire. The "reported year emissions" on the location -based of Group sales subsidiaries outside Japan are 1,645.76tCO₂ for Scope 1 and 4,900.65tCO₂ for Scope 2, for a total of 6,546.41tCO₂.From this, 6,546.41/(202,309.976,546.41)3.13%, which is 3.13%.

[Add row]

(7.5) Provide your base year and base year emissions.

171598.75

(7.5.3) Methodological details

This figure includes the base year emissions of 5,420.92 (t-CO₂) from "Group sales subsidiaries outside Japan" which was excluded in (7.4.1). CO₂ conversion factors for purchased electric power are as follows. - Japan: The average value for all the electric power utilities in Japan, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures, not the substitute value in the list. - Outside Japan: International Energy Agency (IEA) CO₂ emission factors.

Scope 2 (market-based)

(7.5.1) Base year end

03/31/2023

(7.5.2) Base year emissions (metric tons CO₂e)

140199.35

(7.5.3) Methodological details

This figure includes the base year emissions of 4,302.97 (t-CO₂) from "Group sales subsidiaries outside Japan," which was excluded in (7.4.1). The value after deducting

the Green Power Certificate and Green Power Plan. CO2 emission factors for purchased electric power are as follows. - In Japan: The CO2 emission factors without adjustment for each electric power utility, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures. - USA and UK: Residual Mix CO2 emission factors -Singapore/Italy/Austria/Indonesia/Republic of Korea/China, Hong Kong Special Administrative Region, and Taiwan: CO2 emission factors before adjustment for each electric power company. - The other countries: International Energy Agency (IEA) CO2 emission factors.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

428226

(7.5.3) Methodological details

In addition to parts weights and purchase prices, calculations used the relevant basic units from ver.1.01 (domestic data) of the Carbon Footprint Communication Program Basic Database and the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

76577

(7.5.3) Methodological details

Calculated from the investment in equipment and facilities, using the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

24934

(7.5.3) Methodological details

Calculated from the purchase quantities of each type of energy using the relevant basic units from ver.1.01 (domestic data) of the Carbon Footprint Communication Program Basic Database and ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

25411

(7.5.3) Methodological details

Calculated from the material flow in ton-kilometers (calculated by setting up scenarios) using the GHG Protocol Tool.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

2209

(7.5.3) Methodological details

Calculated from the discharge amounts of each type of discarded material using the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 6: Business travel

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

47742

(7.5.3) Methodological details

Calculated from the travel expenses using the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

9283

(7.5.3) Methodological details

Calculated from the commuting expenses using the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

Our emissions from the use of leased offices, leasing equipment and vehicles are direct or indirect emissions, and they are included in Scope 1 and 2. There is no need to manage them separately from Scope 1 and 2, so we do not take into account them as this Scope 3 emission source, therefore emissions from upstream leased assets are not relevant.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

The activity corresponding to this emission source is transportation from stores of consumer products such as cameras to customers' homes. We have done screening assessment for this category in FY 2020, and the emissions from this source occupied only less than 0.1% of total Scope 3 emissions, we evaluated this source as not relevant.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

More than 99% of our products are finished products. Products other than finished products are, for example, encoders and optical components (filters, prisms, etc.),

which are used by being incorporated into customer products, but without processing. Therefore, GHG emissions from this source are almost zero, so we evaluated this source as not relevant.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

100851

(7.5.3) Methodological details

Calculated by multiplying the energy consumption per product (calculated by setting up scenarios) by the sales volume and the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

03/30/2023

(7.5.2) Base year emissions (metric tons CO2e)

1726

(7.5.3) Methodological details

Calculated from the quantity of products discarded (calculated by setting up scenarios) and quantities sold using the relevant basic units from ver.2.6 of the Emissions Basic Unit Database, which is for use in calculating greenhouse gas emissions, etc. of organizations through supply chains.

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

We evaluated this source is not relevant because the percentage of our downstream leased assets occupies only 0.1% of our total assets.

Scope 3 category 14: Franchises

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

We evaluated this category is not relevant because there is no franchise business in our group business.

Scope 3 category 15: Investments

(7.5.1) Base year end

03/30/2023

(7.5.3) Methodological details

We calculated the emissions from this source using the total emissions of each company we own shares and our holdings ratio. We found that the emissions from this source occupied only less than 0.3% of total Scope 3 emissions, so we evaluated this source is not relevant.

[Fixed row]

(7.6) What were your organization's gross global Scope 1 emissions in metric tons CO2e?

Reporting year

(7.6.1) Gross global Scope 1 emissions (metric tons CO2e)

28311.45

(7.6.3) Methodological details

The value is the sum of the followings: - Scope1 CO2 emissions from energy consumption:21,350.92(t-CO2) and - Emissions from non-energy CO2 and the other 5 green-house gases (6.5 gases) in Japan, Thailand, Laos, China, UK, Germany,and USA: 6,960.53 (t-CO2).

[Fixed row]

(7.7) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Reporting year

(7.7.1) Gross global Scope 2, location-based emissions (metric tons CO2e)

173998.52

(7.7.2) Gross global Scope 2, market-based emissions (metric tons CO2e) (if applicable)

53336.55

(7.7.4) Methodological details

For the market-based value, CO2 emission factors for purchased electric power are as follows. The value after deducting the Green Power Certificate and Green Power Plan. - In Japan: The CO2 emission factor factors without adjustment for each electric power utility, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures. - USA,Germany and UK: Residual Mix CO2 emission factor - The other countries: International Energy Agency (IEA) CO2 emission factors. For the location-based value, CO2 emission factors for purchased electric power are as follows. - Japan: The average value for all the electric power utilities in Japan, which is noted in the "List of Emissions Factors by Electric Power Utility" specified in the Act on Promotion of Global Warming Countermeasures, not the substitute value in the list. - Outside Japan: International Energy Agency (IEA) CO2 emission factors.

(7.10) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Select from:

Decreased

(7.10.1) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

Change in renewable energy consumption

(7.10.1.1) Change in emissions (metric tons CO₂e)

90457.26

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

53.54

(7.10.1.4) Please explain calculation

90,457.26 tCO₂ were decreased due to the change on our renewable energy consumption. The breakdown of the decrease is as follows 118.76 tCO₂ due to the decrease in our photovoltaic power generation, and 90,338.50 tCO₂ by the decrease in our Renewable Energy Power purchase. (-118.76 tCO₂-90,338.50 tCO₂ - 90,457.26 tCO₂) . CO₂ emissions (Scope12, market basis) in the previous year were 168,952.86 tCO₂. Therefore, we decreased 53.54% with 90,457.26 / 168,952.86*100 53.54%.

Other emissions reduction activities

(7.10.1.1) Change in emissions (metric tons CO₂e)

1061.04

(7.10.1.2) Direction of change in emissions

Select from:

Decreased

(7.10.1.3) Emissions value (percentage)

0.63

(7.10.1.4) Please explain calculation

*The estimated total annual CO2 savings from emissions reduction activities (excluding those related to renewable energy) by introducing highly efficient transformers, air conditioner and refrigerators and improving the efficiency of electric furnaces and air compressor was 1061.04 tCO2. Our previous year CO2 emissions (Scope12, market base) was 168,952.86 tCO2. We therefore arrived at 0.63% through $1061.04 / 168,952.8 * 1000.63\%$.*

Divestment

(7.10.1.2) Direction of change in emissions

Select from:

Increased

(7.10.1.3) Emissions value (percentage)

1.54

(7.10.1.4) Please explain calculation

The following (1) decrease by 3.19%(5,397.87tCO2e), (2) increased by 4.74%(8,005.02 tCO2), resulting in a total increase of 1.54%(2607.14 tCO2) compared to the previous year.(1) Decrease of 6.5 gases The amount of 6.5 gas (CO2, CH4, N2O, HFC, PFC, SF6, NF3 that are not derived from energy use) used at business sites decreased by 5,397.87tCO2e from the previous year. CO2 emissions for the previous year (Scope1 2, market basis) were 168,952.86 tCO2. Therefore, there is an decreased by $5,397.87 / 168,952.86 * 100 = 3.19\%$.(2) Increase in other production volum Due to the increase in other production, it increased by 8,005.02 tCO2.CO2 emissions (Scope12, market basis) in the previous year were 168,952.86 tCO2. Therefore $8,005.02 / 168,952.86 * 100 = 4.74\%$, an increase of 4.74%.

Change in methodology

(7.10.1.1) Change in emissions (metric tons CO2e)

81.11

(7.10.1.2) Direction of change in emissions

Select from:

Increased

(7.10.1.3) Emissions value (percentage)

0.05

(7.10.1.4) Please explain calculation

*Due to changes in the CO2 emission factor of Japanese electric power companies and overseas announced by the IEA, there was an increase of 81.11tCO2 compared to the previous year. CO2 emissions (Scope12, market basis) in the previous year were 168,952.86tCO2. Therefore, $81.11 / 168,952.86 * 100 = 0.05\%$, reaching 0.05%.*

Consumption of fuel for the generation of electricity	Select from: <input checked="" type="checkbox"/> Yes
Consumption of fuel for the generation of heat	Select from: <input checked="" type="checkbox"/> Yes
Consumption of fuel for the generation of steam	Select from: <input checked="" type="checkbox"/> Yes
Consumption of fuel for the generation of cooling	Select from: <input checked="" type="checkbox"/> Yes

	Indicate whether your organization undertakes this fuel application
Consumption of fuel for co-generation or tri-generation	<i>Select from:</i> <input checked="" type="checkbox"/> No

[Fixed row]

(7.30.7) State how much fuel in MWh your organization has consumed (excluding feedstocks) by fuel type.

Sustainable biomass

(7.30.7.1) Heating value

Select from:

Unable to confirm heating value

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.3) MWh fuel consumed for self-generation of electricity

0

(7.30.7.4) MWh fuel consumed for self-generation of heat

0

(7.30.7.5) MWh fuel consumed for self-generation of steam

0

(7.30.7.6) MWh fuel consumed for self-generation of cooling

0

(7.30.7.8) Comment

“Sustainable biomass” is not consumed.

Other biomass

(7.30.7.1) Heating value

Select from:

Unable to confirm heating value

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.3) MWh fuel consumed for self-generation of electricity

0

(7.30.7.4) MWh fuel consumed for self-generation of heat

0

(7.30.7.5) MWh fuel consumed for self-generation of steam

0

(7.30.7.6) MWh fuel consumed for self-generation of cooling

0

(7.30.7.8) Comment

“Other biomass” is not consumed.

Other renewable fuels (e.g. renewable hydrogen)

(7.30.7.1) Heating value

Select from:

Unable to confirm heating value

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.3) MWh fuel consumed for self-generation of electricity

0

(7.30.7.4) MWh fuel consumed for self-generation of heat

0

(7.30.7.5) MWh fuel consumed for self-generation of steam

0

(7.30.7.6) MWh fuel consumed for self-generation of cooling

0

(7.30.7.8) Comment

“Other renewable fuels” are not consumed.

Coal

(7.30.7.1) Heating value

Select from:

Unable to confirm heating value

(7.30.7.2) Total fuel MWh consumed by the organization

0

(7.30.7.3) MWh fuel consumed for self-generation of electricity

0

(7.30.7.4) MWh fuel consumed for self-generation of heat

0

(7.30.7.5) MWh fuel consumed for self-generation of steam

0

(7.30.7.6) MWh fuel consumed for self-generation of cooling

0

(7.30.7.8) Comment

“Coal” is not consumed.

Oil

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

51852.7

(7.30.7.3) MWh fuel consumed for self-generation of electricity

61.28

(7.30.7.4) MWh fuel consumed for self-generation of heat

18562.66

(7.30.7.5) MWh fuel consumed for self-generation of steam

30308.99

(7.30.7.6) MWh fuel consumed for self-generation of cooling

2919.78

(7.30.7.8) Comment

The Nikon Group consumes Motor Gasoline, Gas Oil, kerosene, LPG and Fuel Oil Number 2.

Gas

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

53466.68

(7.30.7.3) MWh fuel consumed for self-generation of electricity

1497.64

(7.30.7.4) MWh fuel consumed for self-generation of heat

24876.76

(7.30.7.5) MWh fuel consumed for self-generation of steam

8399.72

(7.30.7.6) MWh fuel consumed for self-generation of cooling

18692.55

(7.30.7.8) Comment

The Nikon Group uses natural gas mainly for air conditioning and kitchens.

Other non-renewable fuels (e.g. non-renewable hydrogen)

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

10.39

(7.30.7.3) MWh fuel consumed for self-generation of electricity

0

(7.30.7.4) MWh fuel consumed for self-generation of heat

10.39

(7.30.7.5) MWh fuel consumed for self-generation of steam

0

(7.30.7.6) MWh fuel consumed for self-generation of cooling

0

(7.30.7.8) Comment

It uses hydrogen.

Total fuel

(7.30.7.1) Heating value

Select from:

HHV

(7.30.7.2) Total fuel MWh consumed by the organization

105329.78

(7.30.7.3) MWh fuel consumed for self-generation of electricity

 No**(7.30.19.8) Comment***The power monitoring logging meters are calibrated by a third party. All the electricity generated by solar was consumed in-house.**[Add row]***(7.30.20) Describe how your organization's renewable electricity sourcing strategy directly or indirectly contributes to bringing new capacity into the grid in the countries/areas in which you operate.***Nikon directly contributes to the power generation capacity of the grid, such as by implementing private power generation using solar panels at some business sites. In addition, Nikon is a member of RE100, Japan Climate Initiative, and is asking the electric power industry and the government to accelerate the introduction of renewable energy as a consumer of renewable energy. By using renewable energy supplied by suppliers, we have achieved a 100% renewable energy usage rate at three locations, two in Japan and one in the UK. In addition, a group production company in Thailand procured 100% of I-REC. We will continue to increase the use of renewable energy. In this way, Nikon indirectly contributes to the power generation capacity of the grid.***(7.30.21) In the reporting year, has your organization faced barriers or challenges to sourcing renewable electricity?****(7.30.21.1) Challenges to sourcing renewable electricity**

Select from:

 Yes, both in specific countries/areas and in general**(7.30.21.2) Challenges faced by your organization which were not country/area-specific***The war between Ukraine and Russia has caused a big increase in underlying energy prices, excluding renewable energy value-added. To this is added the exorbitant renewable energy surcharge.**[Fixed row]*

(7.30.22) Provide details of the country/area-specific challenges to sourcing renewable electricity faced by your organization in the reporting year.

- Change in revenue

(7.45.9) Please explain

The total sales amount of the group in FY2022 was 628,105 million yen. The total of Scope 1 and Scope 2 by Market-based in FY2022 was 168,952.86tCO₂. The basic unit for FY2022 was 168,952.86tCO₂/628,105 million yen 0.000000269tCO₂/yen. The total sales of the group in FY2023 was 717,245 million yen. The total of Scope 1 and Scope 2 by Market-based in FY2023 was 81,648.00tCO₂. The basic unit for FY2023 was 81,648.00tCO₂/717,245 million yen 0.000000114tCO₂/yen. The rate of change in FY2023 compared to FY2022 is $1 - (0.000000114\text{tCO}_2/\text{yen}) / (0.000000269\text{tCO}_2/\text{yen})$ 57.7%, a decrease of 57.7%. In FY2023, CO₂ emissions, which are the index numerator, will decrease compared to FY2022 due to CO₂ reduction measures and increased consumption of renewable energy. In addition, it decreased by 57.7% due to the increase in the total sales amount, which is the denominator of the index.

[Add row]

(7.52) Provide any additional climate-related metrics relevant to your business.

(7.52.3) Metric numerator

Amount of waste generated (metric tons)

(7.52.4) Metric denominator (intensity metric only)

7771

(7.52.5) % change from previous year

0.7

(7.52.6) Direction of change

Select from:

Increased

(7.52.7) Please explain

*The scope is Nikon Group in Japan and Group manufacturing companies outside Japan. In FY2023, we aim to 3% or more reduce(7,538 metric tons or less) the amount of waste generated (excluding the amount sold as valuables) compared to FY2018. Waste generated in FY2018 was 7,771 metric tons, and waste generated in FY2023 was 6,237 metric tons. Therefore, $100\% - 6,237 \text{ metric tons} / 7,771 \text{ metric tons} * 100 = 19.7\%$ reduction and achieved the target. Waste generated in FY2022 was 6,194 metric tons, so it was $6,237 \text{ metric tons} / 6,194 \text{ metric tons} * 100 = 100.7\%$, a increase by 0.7% in FY2023 from FY2022.*

Row 2

(7.52.1) Description

Select from:

Waste

(7.52.2) Metric value

0.5

(7.52.3) Metric numerator

Final (landfill) disposal amount

(7.52.4) Metric denominator (intensity metric only)

Amount of waste generated / valuables collected

(7.52.5) % change from previous year

(7.52.6) Direction of change

Select from:

 Increased**(7.52.7) Please explain**

The scope is Nikon and Japanese group manufacturing companies. The final (landfill) disposal rate target for FY2023 is less than 0.5%. By using computer simulation of product development to reduce the production of prototypes, reuse optical glass abrasives, and reduce, reuse and recycle, the waste weight in FY2023 is 3,767.2 metric tons, final (landfill) disposal amount was 3.4 metric tons, and the final (landfill) disposal rate was $3.4 \text{ metric tons} / 3,767.2 \text{ metric tons} * 100 = 0.090\%$, achieving the target. Waste generated in FY2022 was 4,549.7 metric tons, final (landfill) disposal amount was 2.8 metric tons, and the final (landfill) disposal rate was $2.8 \text{ metric tons} / 4,549.7 \text{ metric tons} * 100 = 0.061\%$. So it was $0.090\% / 0.062\% * 100 = 143.7\%$, a increase of 45.16% in FY2023 from FY2022.

Row 3**(7.52.1) Description**

Select from:

 Waste**(7.52.2) Metric value**

1

(7.52.3) Metric numerator*Amount of waste generated (meFinal (landfill) disp***(7.52.4) Metric denominator (intensity metric only)***Amount of waste generated valuables collected***(7.52.5) % change from previous year**

(7.52.6) Direction of change

Select from:

 Decreased**(7.52.7) Please explain**

*The scope is China's group manufacturing companies. The final (landfill) disposal rate target for FY2023 is less than 1%. We reduced the production of prototypes by using computer simulation of product development, reused optical glass abrasives, and reduced, reused and recycled, resulting in a waste weight of 252.66 metric tons in FY2023, the final (landfill) disposal amount was 1.12 metric tons, and the final (landfill) disposal rate was $1.12 \text{ metric tons} / 252.66 \text{ metric tons} * 100 = 0.443\%$, achieving the target. Waste generated in FY2022 was 259.65 metric tons, final (landfill) disposal amount was 1.28 metric tons, and the final (landfill) disposal rate was $1.28 \text{ metric tons} / 259.65 \text{ metric tons} * 100 = 0.493\%$. So it was $0.443\% / 0.493\% * 100 = 100\% - 10.1\%$, a decrease of 10.1% in FY2023 from FY2022.*

(7.53.1.79) % of target achieved relative to base year

87.80

(7.53.1.80) Target status in reporting year

Select from:

Revised

(7.53.1.81) Explain the reasons for the revision, replacement, or retirement of the target

We obtained SBT in 2019. In FY2021, the SBT target was reset to the "1.5 C" level. Furthermore, in January 2024, in order to comply with the Science Based Targets initiative's (SBTi) Net-zero targets, the base year has been changed from FY2013 to FY2022, and the greenhouse gas reduction rate for the target year has also been changed.

(7.53.1.82) Explain target coverage and identify any exclusions

Emissions are net of renewable energy certificates and green electricity plans. "% emissions in scope" is calculated like this: $174,867.40/174,867.40 \times 100 = 100\%$. The numerator figure is the sum of the "Base year Scope 1 emissions covered by target" and "Base year Scope 2 emissions covered by target" in 7.53.1. The denominator figure is a sum of "scope 1" and "scope 2 market base" in 7.5. So there are no any exclusions. (This figure includes emissions from "Group sales subsidiaries outside Japan," which was excluded in (7.4.1).) The years written in the columns for base year, year the target was set and target year are the end of our fiscal year. Our fiscal year starts on 1 April and ends on 31 March in the following year.

(7.53.1.83) Target objective

The target objective is to meet the requirements of the Science Based Targets initiative's (SBTi) Net-zero targets. In addition, due to rising global energy costs and the introduction of a Global Warming Tax in Japan from October 2024, we will reduce our use of non-renewable energy sources to hold down energy costs.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

We are introducing energy-saving production equipment and buildings, enlightening in-house energy-saving measures, improve business efficiency, introducing renewable energy, introducing renewable power menu of electric power companies, purchasing green power certificates, and introducing low-carbon vehicles. In fiscal year 2023, we started solar power generation (PPA) at our Chinese group manufacturing company, and our Thai group manufacturing company uses I-REC for 100% of its electricity consumption. Two of our Japanese group manufacturing companies have purchased renewable energy plans from power companies for 100% of their electricity consumption. These two Japanese group manufacturing companies use electricity from local government-owned power generation facilities and contribute to the local community by paying for it. The calculation method of the target achievement rate is described below. Reduction rate Reporting year/Base year-1 $87,351.77/174,867.40 - 50.05\%$. Target achievement rate Reduction rate/Target rate $50.05 / 57 = 87.80\%$. As a result, in FY2023, the target of reduction of 57% in FY2030 was 50.05%, and the achievement rate was 87.80%.

(7.53.1.78) Land-related emissions covered by target

Select from:

No, it does not cover any land-related emissions (e.g. non-FLAG SBT)

(7.53.1.79) % of target achieved relative to base year

-77.83

(7.53.1.80) Target status in reporting year

Select from:

Revised

(7.53.1.81) Explain the reasons for the revision, replacement, or retirement of the target

We obtained SBT in 2019. In FY2021, the SBT target was reset to the "1.5 C" level. Furthermore, in January 2024, in order to comply with the Science Based Targets initiative's (SBTi) Net-zero targets, the base year has been changed from FY2013 to FY2022, and the greenhouse gas reduction rate for the target year has also been changed.

(7.53.1.82) Explain target coverage and identify any exclusions

The target is company-wide. It excludes the less relevant categories 8.9, 10, 13, 14 and 15, which are expected to have small emissions. The total percentage of these

exclusions is 0.38%.

(7.53.1.83) Target objective

The target objective is to meet the requirements of the Science Based Targets initiative's (SBTi) Net-zero targets.

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

To achieve its Scope 3 targets, the Nikon Group is working to reduce the number of parts in its products, engage with suppliers, and make its products more energy-efficient. Because it is an SBT, the Group recognizes that the target level is in line with the latest international agreements. Progress toward the targets is monitored by the Sustainability Committee, chaired by the President. In fiscal 2023, Scope 3 emissions temporarily increased due to business expansion, but the Group will work to make up for this by fiscal 2030 through measures such as collaboration with suppliers.

(7.53.1.85) Target derived using a sectoral decarbonization approach

Select from:

No

[Add row]

(7.54) Did you have any other climate-related targets that were active in the reporting year?

Select all that apply

Targets to increase or maintain low-carbon energy consumption or production

60.26

(7.54.1.14) Target status in reporting year

Select from:

Revised

(7.54.1.15) Explain the reasons for the revision, replacement, or retirement of the target

Nikon had committed to RE100 by achieving 100% renewable energy by fiscal year 2050, but has now revised its plans to achieve this goal 20 years earlier, by fiscal year 2030.

(7.54.1.16) Is this target part of an emissions target?

It will contribute to our SBT abs 1.

(7.54.1.17) Is this target part of an overarching initiative?

Select all that apply

RE100

(7.54.1.19) Explain target coverage and identify any exclusions

It covers all of our global basis. There is no exclusion.

(7.54.1.20) Target objective

We have set targets as a means to reduce Scope 1 and 2 emissions.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

We are applying the optimal renewable energy introduction method to each business location according to the region and business characteristics. By fiscal 2023, we are working to replace 100% of electricity consumption at three large production bases with renewable energy, and have increased the renewable energy rate for the entire group to 69%.

(7.54.2.15) Is this target part of an emissions target?

Yes. CO2 is reduced by promoting reuse and recycling of waste and reducing the weight of waste generated.

(7.54.2.16) Is this target part of an overarching initiative?

Select all that apply

No, it's not part of an overarching initiative

(7.54.2.18) Please explain target coverage and identify any exclusions

The scope is Nikon Group in Japan and Group manufacturing companies outside Japan. In FY2023, we aim to 3% or more reduce(7,538 metric tons or less) the amount of waste generated (excluding the amount sold as valuables) compared to FY2018. Waste generated in FY2018 was 7,771 metric tons, and waste generated in FY2023 was 6,237 metric tons. Therefore, we were able to reduce it to 6,237 metric tons / 7,771 metric tons * 100 80.3%, and achieved the target.

(7.54.2.19) Target objective

In FY2023, we aim to 3% or more reduce(7,538 metric tons or less) the amount of waste generated (excluding the amount sold as valuables) compared to FY2018.

(7.54.2.21) List the actions which contributed most to achieving this target

We promoted the sale of valuable resources, mainly for paper waste and metal scraps, and reduced waste. We also discharged waste to a waste disposal contractor that promotes recycling.

*Started solar power generation at a group manufacturing company in Germany. This section reports a total of 1 case.
[Add row]*

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

- Compliance with regulatory requirements/standards

(7.55.3.2) Comment

For example, in Japan, we have to reduce CO2 emissions to comply with “Energy Saving Act.” and “Act on Promotion of Global Warming Countermeasures”. We set company-wide energy consumption reduction target to achieve the target of the laws (1% reduction of 5-year average of per unit every year) and conduct CO2 reduction activities. For example, we invest in replacement to highly efficient and energy saving equipments such as inverters.

Row 2

(7.55.3.1) Method

Select from:

- Employee engagement

(7.55.3.2) Comment

The Nikon Group conducts environmental management utilizing ISO 14001. We set company-wide CO2 reduction target, then every site sets a target to achieve the company-wide target and each department sets target accordingly. CO2 reduction activities are placed as one of our normal operations.

Row 3

(7.55.3.1) Method

Select from:

- Internal incentives/recognition programs

(7.55.3.2) Comment

We have Nikon environmental award program. Once a year this program recognizes workplaces, groups, and individuals who have shown dedication and found effective ways to address environmental issues in their daily work.

Row 4

(7.55.3.1) Method

Select from:

- Internal finance mechanisms

(7.55.3.2) Comment

We have a section responsible for managing the company-wide facility budget in Nikon Corporation. The section takes into account the CO2 emissions when making decisions on how to spend the budget. The section is also responsible for choosing electricity and gas suppliers. It considers the CO2 emission factor of each supplier when conducting periodical review.

[Add row]

(7.71) Does your organization assess the life cycle emissions of any of its products or services?

	Assessment of life cycle emissions	Comment
	Select from: <input checked="" type="checkbox"/> Yes	<i>We assess life cycle emissions of our products with IDEA and Carbon Footprint Communication Programme.</i>

[Fixed row]

(7.71.1) Provide details of how your organization assesses the life cycle emissions of its products or services.

(7.71.1.1) Products/services assessed

Select from:

- All new products/services under development

(7.71.1.2) Life cycle stage(s) most commonly covered

Select from:

- Cradle-to-grave

(7.71.1.3) Methodologies/standards/tools applied

Select all that apply

- Other, please specify :IDEA, Carbon Footprint Communication Programme

(7.71.1.4) Comment

[Fixed row]

(7.74) Do you classify any of your existing goods and/or services as low-carbon products?

Select from:

Yes

(7.74.1) Provide details of your products and/or services that you classify as low-carbon products.

Row 1

(7.74.1.1) Level of aggregation

Select from:

Group of products or services

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

Other, please specify :Life Cycle Assessment

(7.74.1.3) Type of product(s) or service(s)

Other

Other, please specify :FPD (Flat Panel Display) Lithography System

(7.74.1.4) Description of product(s) or service(s)

Our FPD (flat panel display) Lithography Business Unit promotes the development and provision of solutions that contribute to improving the productivity of customers' overall production processes and is working to reduce the environmental load and greenhouse gas emissions during product use. We are continuing to improve not only new products but also existing models. For example, the FPD lithography systems for mid- and small-sized panels has improved productivity 1.2 times compared to the model initially introduced. If the amount of reduction in energy consumption is converted to CO2 emission, we see a 17% reduction.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

Other, please specify :Scope3 calculation

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

Use stage

(7.74.1.8) Functional unit used

Assumed to operate 90% of 24 hours a day, 365 days a year, 7 years

(7.74.1.9) Reference product/service or baseline scenario used

Previous model

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

Use stage

(7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

302

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

(CO2 emissions at the stage of use) x (reduction rate)

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

16

[Add row]

(7.79) Has your organization canceled any project-based carbon credits within the reporting year?

Select from:

No

C9. Environmental performance - Water security

(9.1) Are there any exclusions from your disclosure of water-related data?

Select from:

Yes

(9.1.1) Provide details on these exclusions.

Row 1

(9.1.1.1) Exclusion

Select from:

Facilities

(9.1.1.2) Description of exclusion

Small non-manufacturing sites are excluded. These sites are used as offices or service desks, and their water resource usage is extremely low compared to manufacturing sites, and the risk of contamination is also extremely low. Many of them also use small rental offices. Water is supplied under rental contracts and managed by the office landlord.

(9.1.1.3) Reason for exclusion

Select from:

Shared premises

(9.1.1.7) Percentage of water volume the exclusion represents

Select from:

1-5%

(9.1.1.8) Please explain

For the excluded small non-manufacturing sites, we screen their water usage once a year and monitor the percentage of water usage relative to the entire Group. In fiscal 2023, it was 1.2%.

[Add row]

(9.2) Across all your operations, what proportion of the following water aspects are regularly measured and monitored?

Water withdrawals – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group measures the amount of water intake at each facility (office) in real time with an installed flow meter.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each business facility monitors the amount of water withdrawal monthly and inputs data into the environmental data system every month. Nikon Corporation totalizes data from each business facility to calculate the total amount of water withdrawal to confirm that the Nikon Group does not withdraw an excessive amount of water as a whole.

Water withdrawals – volumes by source

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group takes in tap water, groundwater, and rainwater, all of which are measured in real time by installed flowmeters.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each business facility monitors the amount of water withdrawal at each water source monthly and inputs into the environmental data system every month to report to Nikon Corporation. Nikon Corporation is prepared to promptly address droughts or water outages by monitoring the data each business facility inputs.

Water withdrawals quality

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

The Nikon Group constantly monitors the quality of water intake at each facility (office) level. For example, at an optical glass factory that uses groundwater, we constantly monitor water quality strictly to ensure that it does not adversely affect production. Parameters measured include pH, biological oxygen demand (BOD), total suspended solids (TSS) and temperature.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each business facility monitors changes in the quality of water withdrawn at least once a year and report to Nikon Corporation. The business facilities where water quality is especially important constantly monitor the water quality at each water source. The water quality largely affects the finish of polished surfaces of lenses, particularly in the polishing process. For example, microparticles in water can cause numerous scratches on the polishing surface or lower the surface accuracy. Therefore, we believe that water quality monitoring is critical. Monitoring of each water source regularly makes it easy to switch the water source depending on the water quality and prevents the risk of business suspension due to degradation of water quality.

Water discharges – total volumes

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group uses installed flowmeters to measure the amount of wastewater at each facility (office) in real time.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each business facility monitors the amount of water discharge monthly and inputs into the environmental data system every month to report to Nikon Corporation. The Nikon Corporation totalizes data from each business facility to keep track of the total amount of water discharges of Nikon Group.

Water discharges – volumes by destination

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group discharges wastewater into sewers and rivers, and measures the amount of wastewater in real time using installed flowmeters.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each business facility monitors the amount of water discharges at each destination monthly and inputs into the environmental data system every month to report to Nikon Corporation. The facilities that carry out the process that requires tertiary treatment on wastewater constantly monitor the amount of water discharge at each destination. The Nikon Corporation totalizes data from each business facility to keep track of the Nikon Group's total amount of water discharges at each destination.

Water discharges – volumes by treatment method

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

Within the Nikon Group, 55% of facilities (mainly factories) perform tertiary treatment before discharging wastewater, and 45% of facilities (mainly offices) perform primary treatment before discharging wastewater. In addition, each facility (office) measures the amount of wastewater in real time with an installed flow meter.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each facility has more rigorous wastewater standards than laws and regulations and only discharge water treated to meet these standards. Each facility constantly monitors the water discharge with each treatment method to limit the amount of wastewater discharged outside the company in order not to affect the ecosystem.

Water discharge quality – by standard effluent parameters

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Continuously

(9.2.3) Method of measurement

The Nikon Group constantly monitors the quality of wastewater at each facility (office) level. For example, in an optical glass factory that holds a variety of chemicals, pH, metal concentrations, biological oxygen demand (BOD), total suspended solids (TSS), temperature, etc. are constantly monitored through on-site monitoring systems.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. While the Nikon corporation surveys changes in wastewater quality regularly, each business facility constantly performs monitoring to comply with laws, ordinances, agreements, and other rules. Each business facility performs monitoring according to even more rigorous voluntary standard values than are specified in laws and regulations and is prepared to promptly address any anomalies that may be found, not only to prevent legal violations and identify them early on, but also to fulfil our responsibilities as a company that uses water in its business process.

Water discharge quality – emissions to water (nitrates, phosphates, pesticides, and/or other priority substances)

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group has set voluntary standards for nitrates at Department production sites that use nitric acid in the manufacturing process, and monitors them to ensure they do not exceed them. Specifically, wastewater is sampled twice a month and analyzed. To date, we have never exceeded our voluntary standards. We do not monitor phosphates, pesticides or other priority hazardous substances as they are not released into the water.

(9.2.4) Please explain

We calculate the ratio of offices, facilities, and offices for which Nikon Corporation regularly collects data, out of the facilities (offices) within the reporting range defined in 1.5. The Nikon Group uses nitric acid at several business sites, and nitric acid monitoring is conducted at 100% of those business sites. The nitric acid used is batch-processed, so it is not discharged into the wastewater. However, at facilities that use nitric acid, the Nikon Group has established voluntary standards that are stricter than the legal standards for nitrates, and regularly monitors them. In the event that an abnormality is discovered, we have a system in place to promptly respond not only to the prevention and early detection of legal violations, but also to comply with corporate ethics.

Water discharge quality – temperature

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Daily

(9.2.3) Method of measurement

The Nikon Group constantly monitors the quality and temperature of wastewater at all facilities (offices) using sensors.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. We measure temperature as well while constantly performing monitoring to comply with laws, ordinances, agreements, and other rules. Each business facility performs monitoring according to even more rigorous voluntary standard values than are specified in laws and regulations and is prepared to promptly address any anomalies that may be found, not only to prevent legal violations and identify them early on, but also to fulfil our responsibilities as a company that uses water. In addition, we control the temperature of wastewater discharged into rivers not to affect agriculture, fishery, and watershed ecosystem.

Water consumption – total volume

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group calculates the difference between the amount of water intake and the amount of wastewater, and uses it as the amount of water consumed. The amount of water intake and discharge is measured in real time with an installed flow meter.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Because water is never a part of products or services in the business of the Nikon Group, our main water consumption is evaporation from production equipment etc. The Nikon corporation monitors the amount of water withdrawal and the amount of wastewater at each business facility of Nikon group monthly and calculates the amount of water consumption (amount of evaporation) at each business facility from the difference between them.

Water recycled/reused

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group mainly reuses water at Nikon Thailand Co., Ltd., Nikon Lao Co., Ltd., Kumagaya Plant, and Shonan Plant. The amount of reused water for each facility (office) is measured in real time by an installed flow meter.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each facility monitors the amount of recycled water and reused water monthly and inputs into the environmental data system every month to report to Nikon Corporation. Use of recycled water and reused water is part of our measures to reduce the withdrawal of water and effectively use water to preserve water resources. We use collected data to check the status of achievement and develop additional measures. For example, the Kumagaya Plant, our main manufacturing site of semiconductor lithography systems, implemented a process to reuse the concentrated water generated in the manufacturing process as makeup water for cooling towers and succeeded in saving approximately 39 megaliters of tap water in FY2023.

The provision of fully-functioning, safely managed WASH services to all workers

(9.2.1) % of sites/facilities/operations

Select from:

100%

(9.2.2) Frequency of measurement

Select from:

Monthly

(9.2.3) Method of measurement

The Nikon Group regularly confirms whether WASH services are provided to all employees through internal methods such as internal audits.

(9.2.4) Please explain

Of the facilities (business facilities) within the boundaries of the report defined in 1.5, those from which the Nikon Corporation periodically collects data are used to determine the ratio of operation sites, facilities, and businesses. Each facility monitors water used for drinking, cooking, and cleaning monthly to ensure that the water meets safety standards so that employees will not get diseases from the water. Miyagi Nikon Precision and Nikon Mito Plant had been using septic tank as their drainage system but switched to sewer system for better hygiene in 2017 and 2018 respectively. Nikon Group has been working to improve the hygiene of each business facility.

[Fixed row]

(9.2.2) What are the total volumes of water withdrawn, discharged, and consumed across all your operations, how do they compare to the previous reporting year, and how are they forecasted to change?

Total withdrawals

(9.2.2.6) Please explain

*Nikon Group aims to continue expanding its business activities. At the same time, the Nikon Group is promoting water reuse. For example, at the Kumagaya Plant, which manufactures semiconductor lithography system, a system was introduced in fiscal 2018 to reuse wastewater from the pure water production equipment as cooling water for the cooling tower. As a result, 39 megaliters of wastewater will be reused in fiscal 2023. Therefore, even if the Nikon Group's business activities expand in the future, we expect the total water withdrawal volume to remain at the current level. *The criteria for comparison with the previous reporting year are as follows:*

Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower

(9.2.2.6) Please explain

*Nikon Group's business does not use water in its products or services. Water usage is the amount of evaporation from each production facility, and total usage is calculated as the difference between the total amount of water withdrawn and the total amount of water discharged. The Nikon Group's total water usage in fiscal year 2023 increased by 7.7% compared to the previous reporting year. In fiscal year 2023, evaporation at Nikon Thailand Co., Ltd., Nikon Group's main factory for imaging products, increased by 35% compared to the previous year. Last year, the water recycling system at Nikon Thailand Co., Ltd., broke down, resulting in a decrease in the amount of recycled water and an increase in evaporation. Nikon Thailand Co., Ltd., is one of the Nikon Group's bases with a high water withdrawal rate. As a result, evaporation for the entire Nikon Group increased, and total usage also increased by 7.7%. *The criteria for comparison with the previous reporting year are as follows: ·*

Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower

*Substances that pollute water in the Nikon Group's manufacturing processes include abrasives and various heavy metals used in the lens manufacturing process, wastewater generated in the surface treatment process, and acids and alkalis generated in the cleaning process. In response to these, the Nikon Group treats wastewater according to its own voluntary standards that are stricter than the laws and regulations of each country. For example, in Japan, wastewater discharged into sewerage systems is regulated by the Sewerage Act, and discharged water is regulated by the Water Pollution Prevention Act. The Nikon Group's tertiary treated wastewater volume in FY2023 was almost the same (down 0.5%) as the previous reporting year. In FY2023, tertiary treated wastewater will account for 56% of the total wastewater volume. *The criteria for comparison with the previous reporting year are as follows: · Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower*

*The Nikon Group performs primary treatment on wastewater that does not contain harmful pollutants generated during the production process, from domestic wastewater to industrial wastewater, to generate wastewater and indirect cooling water. Suspended solids are removed through screens and grid chambers and then discharged. The Nikon Group's primary treated wastewater discharge in fiscal 2023 decreased by 5.3% compared to the previous fiscal year. The main factor is the decrease in the amount of indirect cooling water discharged at Sagami-hara Plant and Tochigi Nikon. The amount of primary treated wastewater in fiscal 2023 will account for 44% of the total wastewater volume. The quality of primary treated wastewater complies with the Sewerage Law. *The criteria for comparison with the previous reporting year are as follows: · Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower*

0

(9.2.10.2) Categories of substances included

Select all that apply

Nitrates

(9.2.10.4) Please explain

The Nikon Group regularly monitors nitrates in wastewater at Department sites that use nitric acid in the manufacturing process. In addition, regarding the amount of nitrates in wastewater, we have established voluntary standards that are even stricter than the standards set by the government, and we regularly monitor them. In addition, the nitric acid used in the manufacturing process is batch processed, so it is not expected to be released into water. Through regular monitoring, we also confirm that nitrates are not released into the water. Phosphates, pesticides, and priority hazardous substances identified by WFD are not monitored as they are not discharged into water.

(9.3.4) Please explain

Nikon (Thailand) Co., Ltd. owns one of the main plants of Nikon's Imaging Business Unit whose sales accounts for approximately 39 % of the total sales of Nikon Group. The plant manufactures approximately 90 % of Nikon's imaging products, including digital cameras and interchangeable lenses. Nikon (Thailand) Co., Ltd. mainly purchases the components from the local suppliers. If the local suppliers' businesses are badly damaged by the heavy rain or flood caused by typhoons, the components can become unavailable due to the suspended supply chain. This can cause a drop in production capacity or operation suspension and can result in loss of revenue. We have identified 17 major supplier sites of Nikon (Thailand) Co., Ltd. as facilities with water-related risks. We plan to conduct a more detailed water risk analysis in the future.

*Nikon Lao Co., Ltd. is one of the factories of the Imaging Business, which accounts for approximately 39% of the Nikon Group's sales. Nikon Lao Co., Ltd. used groundwater and rainwater for domestic water, but started drawing tap water from March 2022. Until fiscal 2017, water was drawn from a nearby pond, but with the introduction of a water purifier aimed at effective use of water resources, water is no longer drawn from the pond. Nikon Lao Co., Ltd. purifies domestic wastewater and reuses it as toilet water, gardening water, and cooling water. For this reason, Nikon Lao Co., Ltd. does not discharge wastewater. Therefore, water intake and water usage are the same. Nikon Lao Co., Ltd.'s water intake and water usage in fiscal 2023 increased by 57% compared to the previous reporting year. The main reason is an increase in production volume. *The criteria for comparison with the previous reporting year are as follows: · Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower*

About the same

(9.3.1.29) Please explain

*Nikon Yokosuka Plant is a factory that manufactures FPD (Flat Panel Display) exposure equipment, which is part of the precision machinery business that accounts for approximately 31% of Nikon Group sales. Nikon Yokosuka Plant only takes in tap water and discharges water from the sewer system. Nikon Yokosuka Plant has been promoting efficient water management since fiscal year 2022. The amount of water withdrawal, discharge, and water consumption in fiscal year 2023 were almost the same as those in the previous reporting year. The main source of water usage at Nikon Yokosuka Plant is evaporation from various facilities, accounting for approximately 2% of the total water withdrawal. *The criteria for comparison with the previous reporting year are as follows: · Less than 5%: Almost the same · 5 to less than 20%: high/low · 20% or more: significantly higher/lower*

(9.5) Provide a figure for your organization’s total water withdrawal efficiency.

(9.5.1) Revenue (currency)

717245000000

(9.5.2) Total water withdrawal efficiency

197493487.97

(9.5.3) Anticipated forward trend

The Nikon Group promotes the effective use of water. Specifically, we reuse wastewater at Nikon Kumagaya Plant, Nikon Shonan Branch Office, Nikon Thailand Co., Ltd., and other locations. In fiscal 2023, the Nikon Group as a whole reused 269.75 megaliters. The reuse rate is 6.9%. The Nikon Group plans to continue promoting the effective use of water. Therefore, it is expected that the water intake efficiency of the entire Nikon Group will improve in the future.

(9.13) Do any of your products contain substances classified as hazardous by a regulatory authority?

	Products contain hazardous substances
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(9.13.1) What percentage of your company's revenue is associated with products containing substances classified as hazardous by a regulatory authority?

Row 1

(9.13.1.1) Regulatory classification of hazardous substances

Select from:

Candidate List of Substances of Very High Concern for Authorisation above 0.1% by weight (EU Regulation)

(9.13.1.2) % of revenue associated with products containing substances in this list

Select from:

10-20

(9.13.1.3) Please explain

Our products do not contain harmful substances other than SVHC. Here, "does not contain hazardous substances" means that it is used in applications where use is permitted below the thresholds stipulated by laws and regulations. In order to reduce the environmental burden, it is necessary to improve the functionality of products

and downsize them, so some parts contain SVHC (Substances of Very High Concern). For products containing 0.1w% or more of SVHC, the content information is registered and disclosed in ECHA's SCIP database, and information necessary for product disposal, etc. is provided, which leads to a reduction in the impact on the human body and the environment.

[Add row]

(9.14) Do you classify any of your current products and/or services as low water impact?

(9.14.1) Products and/or services classified as low water impact

Select from:

Yes

(9.14.2) Definition used to classify low water impact

The Nikon Group does not produce water as a product. Therefore, the Nikon Group evaluates the water dependency of its products based on the amount of water withdrawn and fresh water consumed at its production sites. For example, if a production site begins to reuse water and is able to reduce water withdrawal and freshwater consumption by 10%, we believe that the water dependency of the products produced at that site can be reduced by 10%. In other words, we define our water dependency as the amount of water required for production, and we are working to reduce it.

(9.14.4) Please explain

The Nikon Group promotes the reuse of water and is implementing various initiatives centered on production sites with large amounts of water intake. In fiscal 2018, the Nikon Kumagaya Plant, which manufactures semiconductor lithography system, one of the Nikon Group's main products, introduced a system to use the large amount of concentrated water generated in the ultrapure water manufacturing process as make-up water for cooling towers. In October 2020, we worked to further expand the reuse of water. As a result, Nikon's Kumagaya Plant has reused 39 megalitres of water in fiscal 2023. This is equivalent to 13% of the total water intake at Nikon's Kumagaya Plant. In other words, the amount of water used in the manufacture of semiconductor lithography system is reduced by 13%, contributing to a reduction in environmental impact.

[Fixed row]

(9.15) Do you have any water-related targets?

Select from:

Yes

(9.15.1) Indicate whether you have targets relating to water pollution, water withdrawals, WASH, or other water-related categories.

Water pollution

(9.15.1.1) Target set in this category

Select from:

No, and we do not plan to within the next two years

(9.15.1.2) Please explain

The Nikon Group has set "reduction of water intake" as a quantitative water target until FY2020. However, from FY2021, it has been changed to "reduce freshwater consumption." Therefore, there are currently no plans to set water withdrawals as a quantitative water target. In addition, the Nikon Group has set the following quantitative water-related targets from the perspective of reducing environmental impact and making effective use of water resources. - Reduce freshwater consumption by 5% or more compared to fiscal 2018 by fiscal 2030

Water withdrawals

(9.15.1.1) Target set in this category

Select from:

No, but we plan to within the next two years

(9.15.1.2) Please explain

The Nikon Group has set "reduction of water intake" as a quantitative water target until FY2020. However, from FY2021, it has been changed to "reduce freshwater consumption." Therefore, there are currently no plans to set water withdrawals as a quantitative water target. In addition, the Nikon Group has set the following quantitative water-related targets from the perspective of reducing environmental impact and making effective use of water resources. - Reduce freshwater consumption by 5% or more compared to fiscal 2018 by fiscal 2030

Water, Sanitation, and Hygiene (WASH) services

(9.15.1.1) Target set in this category

Select from:

- No, and we do not plan to within the next two years

(9.15.1.2) Please explain

The Nikon Group already has an adequate WASH service in place, and we regularly check it through internal methods such as internal audits. Therefore, there are currently no plans to set WASH services as a quantitative water target.

Other

Sustainable Development Goal 6

(9.15.2.13) Explain target coverage and identify any exclusions

Target coverage of the Nikon Group is the Organization-wide (direct operations only). And it is a common target for the organization.

(9.15.2.14) Plan for achieving target, and progress made to the end of the reporting year

The Nikon Group believes it is important to restore the quality of the water we use to its original state or even better, and has therefore introduced new indicators for freshwater usage from fiscal 2021. We have also set a target of reducing freshwater usage by 5% or more compared to fiscal 2018 by fiscal 2030. Freshwater usage in fiscal 2023 was reduced by 3.4% compared to fiscal 2018. However, the Nikon Group's production volume is expected to continue to increase. The Nikon Group will continue to strive to reduce freshwater usage.

(9.15.2.16) Further details of target

The Nikon Group is promoting the reuse of wastewater. For example, at Nikon's Shonan Branch, where photomask substrates are manufactured, a system was introduced in fiscal 2018 to reuse wastewater from the cleaning process as supply water for the pure water manufacturing equipment. Additionally, at the Kumagaya Plant, where semiconductor lithography system is manufactured, a system was introduced in fiscal 2018 to reuse concentrated water as make-up water for cooling towers as a measure to make effective use of the water. Through these efforts, the Nikon Group now reuses approximately 7% of the total amount of water it withdraws. In addition, this also contributes to reducing freshwater consumption.
